¹ This grammatical sketch of Zaar has been written as an annex to the annotated Zaar Corpus transcribed for the CorpAfroAs project (ANR-06CORP). It has been meticulously checked and corrected by Raymond Boyd. Many of his suggestions have been taken into account. The final decisions and remaining mistakes are mine..

1 Introduction

The *Zaar* live in the South of Bauchi State (Nigeria), in the Tafawa Balewa and Bogoro Local Government Areas. In the absence of a population census, a rough estimate would put their population at 150 000.

The names derived from the root "Saya" (i.e. *Bàsáyè:*, pl. *Sáyá:wá:*, for the speakers, and *Sáyánci:* for the language) are the names used by the Hausa. The speakers call themselves *Zaar* (pl. *Zàrsà*) meaning 'human being', and call their language *vik Zaar* (lit. 'mouth of men'). As they consider the term "Saya" derogatory, we use the term *Zaar* to refer both to the people and to the language.

A *Zaar* "village" will have a scattering of the compounds typical of the Nigerian savannah. A compound (*dàn*, pl. *dànsá*) is made up of mud huts (*vi:n*, pl. *vi:nsá*) with grass roofs arranged in a circle and surrounded by walls that preserve the intimacy of the inhabitants. Formerly, the *Za:r* had only a religious chief, but they have recently adopted the Hausa chieftaincy system.

According to their oral tradition, the *Zaar* originate from the lake Chad area. They started migrating southwestwards about four hundred years ago because of the deterioration of farming conditions, or because of the proliferation of slave hunting that developed in the Hausa and Borno kingdoms. After stopping in Duguri, they moved again southeastwards. Shimizu (78: 10) states that:

"The homeland of the speakers of the southern Bauchi group of Chadic was around the three hills Tala, Kir and Buli hills, which are located just to the south of the Bauchi township."

They moved again further south to take refuge in the hills on the east side of the plateau area. Many moved down to their present location in the plain at the foot of those hills when the area was pacified under British colonization.

Newman 1980 classifies *Zaar* in the West-B3 group of Chadic languages, with some doubts arising from the properties it shares with Angas. Four dialects can be distinguished within *Zaar*, named after the main villages or towns where they are spoken: *Bogoro* (formerly called the Lusa dialect), *Gambar Lere*, *Marti* and *Kal*. The *Kal* dialect is very close to what is generally called the *Sigidi* or *Gu:s* language (cf. Caron 2001), so much so that *Gu:s* can be considered a dialect of *Zaar*.

Most *Zaar* people of the younger generation are bilingual in Hausa-*Zaar*. They are schooled in Hausa in primary school, before learning English. The *Zaar* are Christians and use a Hausa translation of the Bible. The older generation are not sure of themselves in Hausa, whereas the younger educated elite, who often hold positions in the administration, police and education, switch comfortably between *Zaar*, Hausa and English.

1.1 General abbreviations

±D	± Depressor consonant
AP	Adjectival Phrase
F	Falling tone
H	High tone
IU	Intonation Unit
L	Low tone

M	Mid tone
NP	Noun Phrase
PosL	Possessive Link

2 The sounds of Zaar²

2.1 Segment inventory

2.1.1 Consonants

glottalized	voiceless obstruents	continuants
<i>b</i> <i>d</i>	<i>p</i> <i>t</i> <i>k</i>	<i>m</i> <i>n</i> (<i>ŋ</i>) <i>ŋ</i>
	<i>ts</i> (<i>tʃ</i>)	<i>l</i>
	<i>f</i> <i>s</i> (<i>ʃ</i>)	<i>r</i>
	<i>ʈ</i>	
	voiced obstruents	glides
	<i>b</i> <i>d</i> <i>g</i>	<i>j</i> <i>w</i> (<i>h</i>)
	<i>(dʒ)</i>	
	<i>v</i> <i>z</i> (<i>ʒ</i>) (<i>ʎ</i>)	
	<i>ʙ</i>	
	prenasalized obstruents	
	^m <i>b</i> ⁿ <i>d</i> ^ŋ <i>g</i>	
	ⁿ <i>dz</i> (ⁿ <i>dʒ</i>)	

Phonemes in parentheses are distinctive only in foreign words or other very limited morpheme classes.

2.1.2 Vowels

short			long		
<i>i</i>	<i>u</i>		<i>i:</i>	<i>u:</i>	
<i>e</i>	<i>ə</i>	<i>o</i>	<i>e:</i>	<i>ə:</i>	<i>o:</i>
	<i>a</i>			<i>a:</i>	

2.2 Sound changes

2.2.1 Devoicing

Morpheme-final obstruents are voiceless.

2.2.2 Neutralization of velar obstruents

Although *k* and *g* are distinctive in morpheme-initial position in members of the lexical categories, this distinction is neutralized in other environments: velar obstruents followed by a voiced segment are voiceless after a voiceless segment or pause boundary and voiced after a voiced segment. Voiced velars are also continuant unless preceded by a nasal. This accounts for the variation in the nominalizing suffix *–káni* which derives verbal nouns:

²This section concerning phonology is based on Schneeberg (1974).

<i>káp-káni</i>	<i>tjim-⁹gáni</i>	<i>fú:-yáni</i>
‘getting’	‘calling’	‘saying’

2.2.3 Palatalization

Velar consonants are palatalized before a front vowel or glide. Except for liquids and implosives, abruptly released alveolar consonants are palatalized before a palatal glide. Except for laterals, alveolar consonants without abrupt release are palatalized before any nonconsonantal palatal.

2.2.4 Glottalization

Voiced labial and alveolar stops are implosive if preceded by a vowel or liquid, or in initial position in a grammatical formative. When followed by a vowel, morpheme-final labial and alveolar stops are phonetically voiced and implosive. This happens, for example, when the *-ən* plural morpheme is suffixed to verbs.

	sg	pl
‘harvest’	<i>kas</i>	<i>kas-án</i>
‘shave’	<i>wuɫ</i>	<i>wuɫ-án</i>
‘take’	<i>kap</i>	<i>kab-án</i>
‘drive away’	<i>kat</i>	<i>kaɗ-án</i>

2.2.5 Vowel merger

Suffixation sometimes entails the merger of final vowels with the initial vowel of the suffix. The suffixed definite article modifier *-ês* (DEF) entails the following changes: *u- + -e > -o-*; *a- + -e > -o-*. With the 1SG.POS pronoun, the suffix *-âtn* gives rise to the following mergers: *u- + -a > -o-*; *i- + -a > -e-*.

	ART.DEF <i>-ês</i>	1SG.POS <i>-âtn</i>
<i>tû:</i> ‘meat’	<i>tô:s</i>	<i>tô:tn</i>
<i>ngulki</i> ‘club’	<i>ngulkês</i>	<i>ngulkêtn</i>
<i>màrwa</i> ‘millet sp.’	<i>màrwôs</i>	<i>màrwâtn</i>

2.3 Tone system

Zaar has a three-tier tone system: H (marked with an acute accent: *á*), M (unmarked: *a*), L (marked with a grave accent: *à*).

Initial nonimplosive voiced obstruents have a depressor effect on tones in a some grammatical environments³. Let us take Verbal Nouns (N.V) suffixing *-káni* as an example. All tones in the NV are L for verbs beginning with a nonimplosive voiced obstruents (+D) while the pattern is (M)HHL for verbs beginning with any other consonant (-D).

‘call’	<i>tjim</i>	<i>tjimngáni</i>	(<i><tjim-káni</i>)
‘choose’	<i>bwa:</i>	<i>bwà:yàni</i>	(<i><bwa:-káni</i>)

³ Cf. Hyman (73), Hyman & Schuh (1974) and Caron (2009).

L tone tends to spread over M clitics (tonal sandhi). This can be seen in direct pronominal objects, e.g. *à: v̄aryà* (< *v̄ar=kə*) ‘he has (3S.PFV) given you’ vs. *á v̄aryà* (< *v̄ar=kə*) ‘he (3S.AOR) gave you’.

3 Nonverbal predication

Zaar uses verbal and nonverbal clauses. In verbal clauses, the syntactic nexus is an inflected verb. The verb, as a lexical category, is defined by its inability to assume any other function than that of nexus of a sentence⁴. The verb is inflected for Tense, Aspect, and Mood (TAM). In *Zaar*, this inflection (INFL) is combined with a mark of person agreement with the subject (PN). The Inflection is therefore labelled PN.TAM in the \rx line of the corpus.

Ex 1. Subject INFL Verb Object
 ngan̄á:s *tá* *dj̄ä:* *va:t*
 N.P 3PL.AOR can forge
 The Nganya can forge.

In nonverbal clauses, the syntactic nexus is a Predicative Particle (PTCL.PRED). These particles are not marked for Tense, Aspect, or Mood.

Ex 2. NP PTCL.PRED NP
 gín *nə* *ni:?*
 this COP1 what
 What is this?

Ex 3. NP PTCL.PRED
 m̄a:ndá *ḡət* *kən*
 fight\POSL woman COP2
 It is a fight about women (lit. fight\of woman)

Nouns can appear both in the predicating position, e.g. with predicative particles in nonverbal clauses, or as the argument of a verb, a preposition, etc.

3.1 Equative clauses: *nə* (COP1)

The structure is < NP₁ *nə* NP₂ > ‘NP₁ *be* NP₂’. This structure is used to identify the two terms of an equation.

Ex 4. *Bitúrús* *nə* *pásto=wòpm.*
 Peter COP1 pastor=1PL.POS
 Peter is our pastor.

When the context is explicit, NP₁ can be omitted. This is the normal situation when the NP₁ is [-human].

Ex 5. *nə* *d̄zòmì.*
 COP1 true
 It is true.

Ex 6. — *nə* *nu:?* — *nə* *sám̄bâr.*
 COP1 who COP1 stranger
 — Who is it? — It’s a stranger.

⁴ Creissels (95).

When NP₁ is [+human], it can appear as a pronoun. This pronoun is chosen from the special paradigm of subject pronouns appearing with predicative particles or nonverbal predicates.⁵

1s	<i>mi nə m̂:r</i>	I am a thief
2s	<i>ki nə m̂:r</i>	You (s) are a thief
3s	<i>tʃi nə m̂:r</i>	He is a thief
1p	<i>mì nə mə:r̂ŋsə</i>	We are thieves
2p	<i>kì nə mə:r̂ŋsə</i>	You (p) are thieves
3p	<i>tʃì nə mə:r̂ŋsə</i>	They are thieves

3.2 Identifying clauses

3.2.1 = *kən* 'it is' (COP2)

Structure: <NP = *kən*> 'it is NP'. This clitic particle is used to name and assert the existence of something.

Ex 7. *mɑ:ndə gət=kən.*

war.POS woman=COP2

Well, it was a fight about women (lit. 'a fight of women').

It is used in focus constructions:

Ex 8. *ŋaŋɑ:s=kən tá dʒǎ: va:t.*

Nganyas=COP2 3PL.AOR can forge

It's the Nganya who can forge.

It can be combined with the equative *nə*:

Ex 9. *tá ĵ:n nə ŝŋwa:r̂es=kən já: m̂s dzàŋ gí: f̂ɑ:?*

then if COP1 priest=COP2 3SG.COND die day this Q

Then, what if it is the religious chief who dies on that day?

3.2.2 = *kəní* = *kənín* = *kəndí*

For extra emphasis, = *kən* can suffix *-í*, *-ín* (<*-ín*) or *-dí*.

Structure: <NP = *kəní*/=*kəndí*/=*kənín*> 'here is NP'.

The three forms, very close semantically, are frequently used to identify the focus in a focus construction.

- In the form = *kəní*, *-í* is an operator that asserts the existence of the operand within the referential domain of the speech act.

Ex 10. *ĵɑ:kəní! [ĵɑ:yəní]*

3SG.IDP=COP2

Here he/she is!

The neutralization of the initial velar obstruent applies: [*ǎlbása=yəní*; *kǎt̂n=ŋəní*; *tʃit=kəní*] 'here are onions; here are egg plants; here is *acha* (*Digitaria* sp.)'.

- =*kən-ín* results from the suffixation of the proximal deictic *-ín* to the = *kən* form.

Ex 11. *dək ŋgəfín dan mĵɑ:jí zaktí:*
reason.POS thing.DEF.PROX REL 1PL.IPVV.ITER show.3SG.OBJ.RES

ĵɑ:n ĵi=kən-ín
3SG.IDP be=COP2-PROX

The reason why we used to celebrate it is ...

⁵ This set of pronouns can be analysed as <PN + *ji* 'be'>: *mi-ji*; *kə-ji*; *tə-ji*; *mə-ji*; *kə-ji*; *tə-ji*.

- =*kən-dí* is the distal counterpart of = *kən-ín*.

Ex 12. *jâ:n* *dè:-wòs* *bét=kən-dí* *tu* *lâpm* *za:r-o:*
 3SG.IDP reason-3S.POS all=COP2-DIST COMP moon\POSL Zaar-FACT
That's the only reason why it is called Lepm Zaar.

3.3 Existential clauses: *da* 'there is' (COP3)

The structure of the clause is: <NP₁ *da*> 'there is NP₁'.

Ex 13. *kafá:* *da* *zà:m* *da* *gà:rí* *da* *gwàté* *gedí* *da*
 rice COP3 bean COP3 cassava COP3 potage.of yam COP3
 'There is rice, beans, cassava, yam potage.' (menu of a restaurant as announced by the waitress).

4 The TAM system

The syntactic nexus of verbal sentences is the complex combining TAM (Tense -Aspect-Mood) and PN (Person-Number⁶), cliticized to the left of the verb.

Ex 14. *kó:* *mjá:* *sú:* / *kó:* *má:* *ɲangás* /
 or 1SG.IPFV want / or 1SG.PFV refuse /

<i>wò</i>	<i>kap</i>	<i>-ni</i>	<i>ɲa:</i>	<i>mán</i>	<i>da:</i>	<i>=mí</i>	//
3SG.FUT	take	-INCH	young	people	that_of	=1PL.OBJ	//

 Whether I agree or I refuse, he will marry one of our girls. (SAY_BC_conv_01_SP2_209)

Compared to the other South-Bauchi-West languages, *Zaar* has an exceptionally complex TAM system.

4.1 Aspect

	AOR	PFV	IPFV	ITER	CONC	CONT
1s	<i>mə</i>	<i>má:</i>	<i>mjá:</i>	<i>miji:/mji:</i>	<i>mjá:na:</i>	<i>míyá / mjǎ:</i>
2s	<i>kə</i>	<i>ká:</i>	<i>kjá:</i>	<i>kiji:/kji:</i>	<i>kjá:na:</i>	<i>kíyá / kjǎ:</i>
3s	<i>á</i>	<i>à:</i>	<i>ɥá:</i>	<i>ji:</i>	<i>ɥá:na:</i>	<i>ɥíyá / ɥǎ:</i>
1p	<i>mə</i>	<i>mà:</i>	<i>mǎ:</i>	<i>mà:ji</i>	<i>mǎ:na:</i>	<i>míyá / mǎ:</i>
2p	<i>kə</i>	<i>kà:</i>	<i>kǎ:</i>	<i>kà:ji</i>	<i>kǎ:na:</i>	<i>kíyá / kjǎ:</i>
3p	<i>tə</i>	<i>tà:</i>	<i>ɥǎ:</i>	<i>tà:ji</i>	<i>ɥǎ:na:</i>	<i>ɥíyá / ɥǎ:</i>

Aorist (AOR). The inflection follows the pattern <PN + \emptyset >. It has a narrative functional value, and is the default tense for impersonal verbs and verbs of perception. Verbs appear with a high tone on their first syllable in the first and second persons singular. In the third person singular and in the plural, they appear in the modified form⁷.

Perfective (PFV). The inflection follows the pattern <PN + *á:*>. The form of the verb is the lexical form.

Imperfective (IPFV). The inflection follows the pattern <PN + *já:*>. The verb appears in the lexical form in the singular, and in the modified form in the plural.

Iterative. The meaning is iterative in the imperfective and continuous, punctual with other TAMs. The closest equivalent is the periphrastic Hausa *ji ta'*, meaning 'keep on doing X'. The inflection follows the structure <PN + *ji:*>. The verb appears in the lexical form.

⁶ We have changed the PNG label (Person-Number-Gender) to PN (Person-Number) as *Zaar* has no grammatical gender.

⁷ Cf. § 6, Verb classes

Concomitant. The inflection follows the pattern <PN + *já:* + *na:*>. The verb keeps its lexical form.

Continuous. The inflection follows the pattern <PN + *ji* + *ká* + N.V>. *Ji+ká* is realized [*jiyá*]. In the monosyllabic variant, the singular / plural contrast is marked by a rising MH tone in the singular *vs.* a rising LH in the plural. It is the only place in the language where this contrast is observed. However, it seems to be unstable and tends to be replaced among younger speakers by a contrast between M in the singular and Rising in the plural.

4.2 Tense

	IMM	REC	REM	FUT
1s	<i>mí:</i>	<i>máná:</i>	<i>mátá</i>	<i>ma</i>
2s	<i>kí:</i>	<i>káná:</i>	<i>kátá</i>	<i>ka</i>
3s	<i>ájí</i>	<i>áná:</i>	<i>átá</i>	<i>wò</i>
1p	<i>mì:</i>	<i>mànà:</i>	<i>mètà</i>	<i>má</i>
2p	<i>kì:</i>	<i>kànà:</i>	<i>kètà</i>	<i>ká</i>
3p	<i>ǵí:</i>	<i>tànà:</i>	<i>tètà</i>	<i>tá</i>

Immediate past. The Immediate Past refers to events which occurred earlier in the same day. The inflection follows the pattern <PN + *ji*>. The first syllable of the verb takes a low tone.

Recent Past. The Recent Past refers to events which occurred on the previous day. The inflection follows the pattern « PN + *ná:* ». The verb keeps its lexical form.

Remote Past. The Remote Past refers to events which occurred more than two days ago. The inflection follows the pattern <PN + *ta*>. The verb keeps its lexical form.

Future. The inflection follows the pattern <PN + *a*>. The verb appears in its lexical form in the singular, and the modified form in the plural.

4.3 Mood

	SUBJ	COND	CTF
1s	<i>mè</i>	<i>mjá:</i>	<i>mí/mijí</i>
2s	<i>à:</i>	<i>kjá:</i>	<i>kí/kijí</i>
3s	<i>tè</i>	<i>já:</i>	<i>ǵí/jí/ǵijí/tijí</i>
1p	<i>mè + L</i>	<i>mǵǎ:</i>	<i>mì/mìjì</i>
2p	<i>à: + L</i>	<i>kǵǎ:</i>	<i>kì/kìjì</i>
3p	<i>tè + L</i>	<i>jǎ:/ǵǎ:</i>	<i>ǵì/ǵìjì/tìjì</i>

Subjunctive. The inflection follows the pattern <PN + low tone>. In the plural, a low tone is added to the first syllable of the verb.

Conditional. The inflection follows the pattern <PN + *já:*>. In the first and second persons singular, the verb takes a high tone on its first syllable. In the other persons, the verb appears in the modified form. The only difference with respect to IPRF is in 3s.

Counterfactual. The inflection follows the pattern <PN + *jí*>. The verb appears in the modified form. The Counterfactual is introduced by the conjunctions *já:n* or *dà:* (< Hausa) ‘if, if only’ with a counterfactual meaning.

4.4 Composition

4.4.1 Compound aspects

The three basic aspects (Perfective, Imperfective, Aorist) cannot be combined.

	PFV.ITER	IPFV.ITER	IPFV.CONT	PFV.CONT
1s	<i>má:ji</i>	<i>mjá:ji</i>	<i>mjá:jiγá</i>	<i>miji:jiγá</i>
2s	<i>ká:ji</i>	<i>kjá:ji</i>	<i>kjá:jiγá</i>	<i>kiji:jiγá</i>
3s	<i>à:ji</i>	<i>tjá:ji</i>	<i>tjá:jiγá</i>	<i>ji:jiγá</i>
1p	<i>mà:ji</i>	<i>mjä:ji</i>	<i>mjä:jiγá</i>	<i>míji:jiγá</i>
2p	<i>kà:ji</i>	<i>kjä:ji</i>	<i>kjä:jiγá</i>	<i>kíji:jiγá</i>
3p	<i>tà:ji</i>	<i>tjä:ji</i>	<i>tjä:jiγá</i>	<i>tíji:jiγá</i>

Perfective Iterative. The inflection follows the pattern <PN + á: + ji>. All verbs following the *ji* iterative morpheme have lexical form. This is true for all combinations.

Imperfective Iterative. The inflection follows the pattern <PN + jä: + ji>.

Imperfective Continuous. The structure of the inflection is <PN + jä: + ji + ká>. *Ji + ká* is realized [*jiγá*]. The verb appears in the form of a Verbal Noun.

Iterative Continuous. The structure of the inflection is <PN + ji: + ji + ká>. *Ji + ká* is realized [*jiγá*]. The verb appears in the form of a Verbal Noun. This combination is not common and *Zaar* speakers usually prefer to use the Imperfective Continuous instead.

4.4.2 Tense and aspect

Future Punctual. The inflection has the structure: <PN + a + ji>. The verb keeps its lexical form.

Future Continuous. The inflection has the structure: <PN + *a* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Remote Past Perfect. The inflection has the structure: <PN + *á:* + *tá*>. The verb is in the modified form.

Remote Past Imperfect. The inflection has the structure: <PN + *ta* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural (cf. Imperfect).

Remote Past Punctual. The inflection has the structure: <PN + *ta* + *ji*>. The verb keeps its lexical form. Lusa speakers associate this combination with the *Ngòbìjà* dialect. They prefer to use the Recent Past Imperfect.

Remote Past Continuous. The inflection has the structure: <PN + *ta* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Recent Past Perfect. The inflection follows the pattern <PN + *á:* + *ná:*>. The verb appears in the modified form.

Recent Past Imperfect. The inflection follows the pattern <PN + *ná:* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural.

Recent Past Punctual. The inflection follows the pattern <PN + *ná:* + *ji*>. The verbs keep their lexical form. This combination is associated with the *Bógoró* / *Ngòbìjà* dialect by Lusa speakers. They prefer to use the Recent Past Imperfect.

Recent Past Continuous. The inflection follows the pattern <PN + *ná:* + *ji* + *ká*>. The verb is in the form of a Verbal Noun.

Immediate Past Perfect. The inflection follows the pattern <PN + *á:* + *ji*>. The first syllable of the verb receives a low tone.

Immediate Past Imperfect. The inflection follows the pattern <PN + *ji:* + *já:*>. The verb appears in its lexical form in the singular, and in the modified form in the plural.

Immediate Past Continuous. The inflection follows the pattern <PN + *ji* + *ji* + *ká*>. The verb appears in the form of a Verbal Noun.

4.4.3 Mood and aspect

	REC.CONT	REM.CONT
1s	<i>mína:</i>	<i>míta</i>

3s	<i>tína:</i> / <i>tjína:</i>	<i>títa</i> / <i>tjíta</i>
1p	<i>mìnà:</i>	<i>mità</i>
2p	<i>kìnà:</i>	<i>kità</i>
3p	<i>tìnà:</i> / <i>tjìnà:</i>	<i>tità</i> / <i>tjtà</i>

2p	<i>lǎ: mǎl=kí</i>
3p	<i>lǎ: mǎl=fí</i>

Any extra argument (e.g. the thing that has been forgotten) is a comitative (*tǎ* X ‘with X’): *la: à: malǎm tǎ gí*: ‘I have forgotten that’.

6 Verb classes

Zaar has two verb tone classes: Middle (M) and High (H), which can be contrasted in the Perfective. The M class includes both 1- and 2-syllable verbs (M1 and M2 respectively). A variant appears with some PN.TAMs (especially the Imperfective with plural PN) and the initial consonant of the verb is [+D]⁸. For short, we call the Perfective form “lexical”, and the other one “modified”.

	Lexical (PFV)	Modified (PL.IPFV)	
H	<i>sú: (H)</i>	<i>sǔ: (R)</i>	‘love’
M1 [+D]	<i>bwa: (M)</i>	<i>bwà: (L)</i>	‘choose’
M2 [+D]	<i>dá:mbár (MH)</i>	<i>dà:mbár (LH)</i>	‘disturb’
M1 [-D]	<i>tá:r (M)</i>	<i>tǎ:r (F)</i>	‘clear’
M2 [-D]	<i>tú:rǎ (MH)</i>	<i>tǔ:rǎ (FH)</i>	‘push’

6.1 The defective verbs *ji* ‘be’ and *jir* ‘have’

‘Be’ in *Zaar* is expressed by the word *ji*, which can be analyzed as a defective verb. This verb is invariable and only conjugated in the Aorist⁹. The 3s (*tǎ*) and 3p (*tǎ*) TAMs and the verb *ji* merge:

tǎ + ji > tǎj; tǎ + ji > tǎj.

Ex 19. *mur -és tǎj ji nǎmbón*
 man -ART.DEF 3S.AOR.BE be one
 There is only one man (*lit*: the man is one)

The PN is dropped when the subject is [-animate], leaving the bare *ji* verb. When the [-animate] subject is contextual, only the *ji* verb remains with the null Aorist INFL: (*sǎbrés*) *ji nǎmbón*. ‘There is only one (knife)’ (*lit*. ‘(the knife) is one’).

This type of equative sentence has various uses:

- Attributive construction with **numerals**: <NP (AOR) *ji* NUM> (cf. 19 above)

- **Location**: <NP (AOR) *ji* PP>

Ex 20. *kadǎnj-és tǎj kár vǐ:n.*
 dog.PL-DEF 3PL.AOR.be behind hut
 The dogs are behind the hut.

Certain intrinsically locative NP₂ are used with a null preposition.

Ex 21. *ji ∅ vǐ:n*
 AOR.be hut
 It is in the room.

Ex 22. *gèri tǎj ∅ dí:ǎǎn*
 hen 3PL.AOR.be compound
 The hens are in the compound.

⁸ [+D] = nonimplosive voiced obstruent.

⁹ For its use in INFL, cf. the Continuous TAM.

The question-word is (té:)dô:

1s	<i>mi té:dô:?</i>	<i>mi dô:?</i>	‘where am I?’
2s	<i>ki té:dô:?</i>	<i>ki dô:?</i>	‘where are you (s.)?’
3s	<i>tʃi té:dô:?</i>	<i>tʃi dô:?</i>	‘where is he?’
1p	<i>mì té:dô:?</i>	<i>mì dô:?</i>	‘where are we?’
2p	<i>kì té:dô:?</i>	<i>kì dô:?</i>	‘where are you (pl.)?’
3p	<i>tʃi té:dô:?</i>	<i>tʃi dô:?</i>	‘where are they?’

- **Possession:** the locative structure with a [+human] NP₁ and the preposition *tá* ‘with’ produces a possessive meaning:

Ex 23. *mur-ès tʃi tá kadanjì=wòs gùda: m̃a:j.*
 man.DEF 3SG.AOR.be with dogs=3S.POS unit three
 the man had three dogs

The causative derivation¹⁰ applied to *ji* produces the verb *jír* ‘have’, conjugated in the Aorist:

1s	<i>mə jír s̃əb̃ər</i>	I have a knife
2s	<i>kə jír s̃əb̃ər</i>	You have a knife
3s	<i>á jír s̃əb̃ər</i>	He has a knife
1p	<i>má jír s̃əb̃ər</i>	We have a knife
2p	<i>ká jír s̃əb̃ər</i>	You have a knife
3p	<i>tá jír s̃əb̃ər</i>	They have a knife

With a nominal subject, the Aorist TAM is dropped: *Sónde jír mà:fin* ‘Sunday has a motorcycle.’

- **Continuous aspect.** The Continuous is a locative construction using the verb *ji* ‘be’ and the preposition *ká* with a Verbal Noun. The subject pronouns belong to the locative subject paradigm: <Pro + *ji* + *ká* + Verbal Noun¹¹>.

- **Qualification:** <NP ((AOR) *ji*) *nə* NP/AP>

Ex 24. *tʃi nə mə:r̃əŋsə*
 3PL.AOR.be COP1 thieves
 They are robbers.

Ex 25. *gà:l-ès (tʃi) nə dʒi:*
 cow-DEF 3SG.AOR.be COP1 black
 The cow is black.

Ex 26. *vi:n ji nə múr*
 room AOR.be COP1 hot
 The room is hot.

6.2 Verbal derivation

6.2.1 Plural Verbs

Plural verbs, also called “pluractionals”, mark agreement with a plural subject in the case of intransitive verbs, and repeated or distributed action in case of transitive verbs. Two plural verb forms, both glossed –PL2, exist in *Zaar*.

- an **internal plural** characterized by lengthening of the radical vowel, or replacement of this vowel by the vowel /a:/, resulting in a H verb: *dʒom* / *dʒwá:m* ‘pile up, gather’ (with a plural object); *kír* / *kí:r* ‘run’ (with a plural subject); *ndʒol* > *ndʒwá:l* ‘leave, go’ (with a plural subject);

¹⁰ Cf. below (§ 6.2.2) on the causative derivation.

¹¹ Cf. below (§ 4.1) for the full paradigm of the Continuous aspect.

ɫɔp / ɫwá:p ‘sting’; *mal / má:l* ‘get lost’; *nat / ná:t* ‘tie up’; *dat / dá:t* ‘nail down’; *tʃim / tʃi:m* ‘call’; *kəp / ká:p* ‘weave, plant’; *məs / má:s* ‘die’; *vjer / vjá:r* ‘insult’.

- an **external plural** marked by suffixation of *-ń / -án*. The internal plural *ná:t* (pl. < *nat* ‘tie up’ alternates with the form *nadán* (pl. ‘tie up several times or several things; (several people) tie up (sth.)’). Other examples are *bət / bədán* ‘move along’; *sə: / sə:n* ‘breathe’; *tə / tən* ‘go’; *wum / wumán* ‘feel’.

6.2.2 The causative -r

The causative derivation is used in *Zaar* to increase the valency of a verb. When translated into English by *Zaar* speakers, the newly added argument of the verb is introduced by the preposition ‘with’. The distinctive mark of causative verbs is a final /r/, more often /-ar/. All monosyllabic causatives are H verbs. The derivative suffix takes different forms:

The *-r* suffix is added to monosyllabic CV and CVV verbs:

<i>ʃi:</i>	‘get down’	<i>ʃi:r</i>	‘get down with’
<i>nda</i>	‘let in’	<i>ndár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>tár</i>	‘go up with’
<i>su</i>	‘turn’	<i>súr</i>	‘return’
<i>tə</i>	‘go’	<i>tə:r</i>	‘drive’

The *-ar* suffix is added to CVC and CVVC monosyllabic verbs:

<i>dí:p</i>	‘buy’	<i>dí:bár</i>	‘sell’
<i>mal</i>	‘get lost’	<i>malár</i>	‘spoil, scatter’
<i>ŋɔp</i>	‘kneel’	<i>ŋɔbár</i>	‘kneel with’
<i>ndʒol</i>	‘go out’	<i>ndʒolár</i>	‘go out with’
<i>pɑ:s</i>	‘pour’	<i>pɑ:sár</i>	‘pour away’
<i>bə:l</i>	‘divide, share’	<i>bə:lár</i>	‘distribute’
<i>bət</i>	‘see so. off; help out’	<i>bətár</i>	‘shift, move’
<i>bup</i>	‘wait’	<i>bubár</i>	‘wait for so.’

The *-ar* suffix is also used with dissyllabic verbs:

<i>la:tsá</i>	‘pass by’	<i>la:tsár</i>	‘pass with’
---------------	-----------	----------------	-------------

A *-lar* suffix is added to CV monosyllabic verbs.

<i>mbwa:</i>	‘shoot’	<i>mbwa:lár</i>	‘shoot’
<i>nda</i>	‘let in’	<i>ndalár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>talár</i>	‘go up with’
<i>tu</i>	‘arrive’	<i>tulár</i>	‘arrive with’
<i>su</i>	‘turn’	<i>sulár</i>	‘return’
<i>ʃi:</i>	‘get down’	<i>ʃilár</i>	‘get down with’

The *-lar* suffix is also used with CV_r and CVV_r verbs, giving a CV_r*lár* causative.

<i>ɫə:r</i>	‘stop, stand (intr.)’	<i>ɫəlár, ɫəllár</i>	‘stop (tr.)’
<i>kír</i>	‘run’	<i>kilár</i>	‘run with’
<i>ɫar</i>	‘split, cross’	<i>ɫalár</i>	‘split, help across’

Likewise with the suffix *-dár* used with one verb only:

<i>ʃin</i>	‘send’	<i>ʃindár</i>	‘send’
------------	--------	---------------	--------

As can be seen from the above, some CV monosyllabic verbs are associated with two different derivative suffixes, producing two variants:

<i>nda</i>	‘let in’	<i>ndár, ndalár</i>	‘get in with’
<i>ta</i>	‘go up’	<i>tár, talár</i>	‘go up with’
<i>su</i>	‘turn’	<i>súr, sulár</i>	‘return’

<i>fí:</i>	‘get down’	<i>fí:r, fílár</i>	‘get down with’
------------	------------	--------------------	-----------------

6.2.3 The inchoative *-ní*

This extension is used to convey the inchoative meaning of ‘start doing something’ or ‘do something instead of something else’:

Ex 27.	<i>ǵà:r-án!</i>	<i>ǵà:r-án-ní!</i>
	stand.IMP-PL	stand.IMP-PL-INCH
	Keep on standing (pl.)!	Stand up (pl.)!

6.2.4 The resultative *-í:*

Resultative aspect is indicated by the suffix *-í:* added to the end of the verbal group, e.g.

Ex 28.	<i>tò:</i>	/	<i>mjà:ní</i>	/	<i>lâp</i>	<i>ǵá:</i>	<i>ta:</i>	<i>-í:</i>	/
	well	/	1PL	/	place	3SG.COND	cut	-RES	/
	<i>tò:</i>	<i>má</i>	<i>ta</i>	<i>-í:</i>	<i>ná</i>	<i>ǵamtsá</i>	<i>nat</i>	<i>-káni</i>	//
	well	1PL.AOR	go	-RES	for	wood	tie	-NMLZ	//

Well, we, if/when the day breaks, well we go and collect wood. (SAY_BC_Conv_02_SP1_014-17)

7 Gender and number

Zaar does not possess grammatical gender or nominal classes and few nouns form a plural (less than 60 items in the lexicon). Regular plurals are formed with the suffix *-(t)sá* associated with L, MH and MHM tone patterns.

‘hen’	<i>ǵèri</i>	<i>ǵersá</i>	MH
‘dog’	<i>káǵi</i>	<i>kadaǵsá</i>	MH
‘mouse’	<i>mbâp</i>	<i>mbaptsá</i>	MH
‘chief’	<i>ǵùŋ</i>	<i>ǵuŋsá</i>	MH
‘vulture’	<i>kwáǵâk</i>	<i>kwadaksá</i>	MH

A few tone patterns are irregular :

‘viper’	<i>ǵǵigu:ri</i>	<i>ǵǵigu:rínsa</i>
‘head’	<i>ǵàm</i>	<i>ǵàm(t)sá¹²</i>

The irregularities are proportionally quite numerous:

‘woman’	<i>ǵàt</i>	<i>ǵuǵi</i>
‘child’	<i>ǵá:</i>	<i>mə:ri</i>
‘arrow’	<i>pís</i>	<i>piská</i>
‘guest’	<i>sám</i>	<i>samdá</i>
‘sheep’	<i>tâm</i>	<i>timsá</i>

Other irregularities concern words borrowed with their original plural from Hausa:

‘animal’	<i>dabbà</i>	<i>dabbo:bì</i>
‘car’	<i>mó:ta</i>	<i>mo:to:tǵi</i>
‘soldiers’		<i>so:ǵo:ǵi</i>
‘book’	<i>táǵàrda</i>	<i>tàǵàrdu</i>

A good number of family nouns form their plural with the *-(k)ta* [-*ytá*] suffix and MH tones:

¹² The L tone is not associated with the presence of an initial voiced consonant as can be seen from *ǵuŋsá*, plural of *ǵùŋ* ‘chief’.

‘in-law’	<i>dʒit</i>	<i>dʒidəktá</i>
‘cousin’	<i>kúndà:</i>	<i>kundəktá</i>
‘mother’	<i>na:</i>	<i>nəktá</i>
‘sister’	<i>wə:tsá</i>	<i>wətsəktá</i>
‘brother’	<i>jês</i>	<i>jestá</i>

Rather than a true plural suffix, this may be a case of collective or abstract derivation. The most common sort of plural formed with the *-sə* suffix is probably borrowed from neighbouring languages. The original (now exceptional) nominal plurals are restricted to a few terms related to humans (man, woman, children), plurality being expressed through the verbal INFL.

8 Nominal determination

Four suffixes establish four stages of determination:

- *-i*: indefinite article (ART.INDF)
- *-es*: definite article (ART.DEF)
- *-án*: proximal deictic (PROX)
- *-í:*: distal deictic (DIST)

8.1 Indefinite article

The indefinite form of the *Zaar* noun is suffixed with the indefinite article *-i*. Its meaning is that of a low level of determination, a form of individuation introducing a referential value. Its tone copies the last tone of the lexical form of the noun.

‘chief’	<i>gùŋ</i>	<i>gùndʒi</i>
‘spear’	<i>gwa:r</i>	<i>gwa:ri</i>
‘night’	<i>kávit</i>	<i>kávidí</i>
‘work’	<i>la:</i>	<i>la:j</i>

Final lexical contour tones spread over the last two syllables of the suffixed noun and become MH (<R) or HM (<F).

‘fig tree’	<i>gwǎ:m</i>	<i>gwa:mí</i>
‘termite’	<i>ʔi:tn</i>	<i>ʔi:ti</i>
‘sheep’	<i>tî:m</i>	<i>tí:mi</i>

There are cases of resyllabification:

‘porcupine’	<i>gùsùm</i>	<i>gùsmi</i>
-------------	--------------	--------------

8.2 Definite article

The Definite Article (ge: DEF) is an *-es/-os* suffix with a F tone. The *-es* form is suffixed to final consonants and replaces final unreleased nasals:

‘spear’	<i>gwa:r</i>	<i>gwa:rés</i>
‘fig tree’	<i>gwǎ:m</i>	<i>gwa:més</i>
‘sheep’	<i>tâ:m</i>	<i>tá:més</i>
‘termite’	<i>ʔi:tn</i>	<i>ʔi:tés</i>
‘night’	<i>kávit</i>	<i>kávidés</i>

The *-os* form replaces final vowels in polysyllabic nouns:

‘millet’	<i>màrwa</i>	<i>màrwôs</i>
‘orange’	<i>lè:mu</i>	<i>lè:môs</i>

A preceding L tone prevails over the F tone of the definite article:

‘chief’	<i>gùŋ</i>	<i>gùnès</i>
‘woman’	<i>gàt</i>	<i>gàdès</i>

‘abandoned house’ *dàddàn* *dàddànès*

An *-s* form is suffixed to monosyllabic vowel-final nouns. If this noun bears a M tone, it becomes Rising:

‘work’ *la:* *lǎ:s*

There are cases of resyllabification:

‘porcupine’ *gùsùm* *gùsmès*

8.4 Deictics

Zaar has two degrees of deictics: proximal *-án* ‘this’ and distal *-í:* ‘that’.

They are suffixed either to the noun, producing the light deictic, or to the pronominal form of the Possessive Link *ka/ga*, producing the heavy deictic determiners (proximal *gán* and distal *gwí:/gí:*) used with the definite form of the noun:

		<i>heavy PROX/DIST</i>	<i>light PROX</i>	<i>light DIST</i>
‘spear’	<i>gwa:r</i>	<i>gwa:rí gán/gí:</i>	<i>gwa:rán</i>	<i>gwa:rí:</i>
‘fig-tree’	<i>gwǎ:m</i>	<i>gwa:mí gán/gí:</i>	<i>gwa:mán</i>	<i>gwa:mí:</i>
‘sheep’	<i>tâ:m</i>	<i>tâ:mi gán/gí:</i>	<i>tâ:mán</i>	<i>tâ:mí:</i>
‘termite’	<i>tí:tn</i>	<i>tí:ti gán/gí:</i>	<i>tí:tán</i>	<i>tí:tí:</i>
‘night’	<i>kávit</i>	<i>kávidí gán/gí:</i>	<i>kávidán</i>	<i>kávidí:</i>
‘work’	<i>la:</i>	<i>lǎ:j gán/gí:</i>	<i>lǎ:n</i>	<i>la:jí:</i>
‘chief’	<i>gùŋ</i>	<i>gùŋì gán/gí:</i>	<i>gùŋán</i>	<i>gùŋáj</i>
‘porcupine’	<i>gùsùm</i>	<i>gùsmì gán/gí:</i>	<i>gùsmán</i>	<i>gùsmí:</i>
‘millet’	<i>màrwa</i>	<i>màrwaj gán/gí:</i>	<i>màrwán</i>	<i>màrwáj</i>
‘orange’	<i>lè:mu</i>	<i>lè:muj gán/gí:</i>	<i>lè:mún</i>	<i>lè:múj</i>

8.5 Indeterminate qualification: ‘some/other’

Wón is a post-nominal determiner introducing an indeterminate qualitative specification. It is translated by ‘a, some, any, (an)other’¹³, and glossed QLT (ge) and DET (rx). It is suffixed either to the noun, producing the light indefinite *wón* (*mur wón* ‘someone’; *ngátn wón* ‘something’; *lâp wón* ‘somewhere’), or to the pronominal form of the Possessive Link *ka/ga*, producing the heavy form *gón* (*bàtú:re gón* ‘a European’), which can also be used as a pronominal form (glossed QLT and PRO).

8.6 Quantification: numerals

The number system

1	<i>nàmbón</i>	20	<i>táfi-mbàtèŋ</i>
2	<i>mbáŋ</i>	21	<i>táfi-mbàtèŋ tá nàmbón</i>
3	<i>mâ:j</i>	22	<i>táfi-mbàtèŋ tá mbáŋ</i>
4	<i>wupsə</i>	30	<i>táfi-mâ:j</i>
5	<i>nandam</i>	40	<i>táfi-wupsə</i>
6	<i>lim</i>	50	<i>táfi-nàndàm</i>
7	<i>wottsámaj</i>	60	<i>táfi-lim</i>
8	<i>tá:nta:n</i>	70	<i>táfi-wottsá-maj</i>
9	<i>tókndam</i>	80	<i>táfi-tá:nta:n</i>
10	<i>dzúp</i>	90	<i>táfi-tókndam</i>
11	<i>dzúp-tí:ti-nàmbón</i>	100	<i>ku:ri</i>
12	<i>dzúp-tí:ti-mbáŋ</i>	1000	<i>zàngú</i>

¹³ cf. Hausa *wani/wata/wasu*.

Cardinal numbers follow the noun they modify. The noun can be in the plural or in the singular. Cardinal numbers are predicated with the verbs *ji* (and its variants *tʃi/tʃi*) ‘be’ or *fi* ‘do’. The corresponding question word is *wuri* ‘how many’.

Ex 29. —*tá* *fí:* *zàrsà* *wuri* *kó:* *ji* *nàmbón* *káwêj?*
 3PL.AOR do.RES man.PL how or be one only
 —*tá* *fí:* *zàrsà* ... *zàrsà* *wupsà.*
 3PL.AOR do.RES man.PL man.PL four
 —How many people were there, or was there only one?
 —They were four... four people.

They can be used as head of a NP, with elliptical quantified noun:

Ex 30. *nàmbón=wá:sàŋ* *mbáʔəŋ=wà:sàŋ*
 one=3PL.POS two=3PL.POS
 one of them two of them

8.7 Qualification

The Possessive Link (PosL¹⁴) is an essential component of the expression of noun qualification in *Zaar*. It is used to provide a noun with a NP, AP or ordinal numeral modifier. The structure is <NP PosL NP/AP/NUM> where PosL is =*kə*. It has high tone after nouns with final high tone or only mid tones, low tone elsewhere. The PosL can be omitted when immediately preceded by the possessed NP¹⁵. The tone of the PosL is then shifted to the preceding morpheme. If the latter consists of a single level-toned monosyllable, the shifted tone is preceded by the original tone. Elsewhere, the shifted tone replaces the last tone of the morpheme. The effect of this floating tone is visible only with nouns possessing uniform M tone: *mə:ri* ‘children’ > *mə:ri kadanfès* ‘the puppies’; *kot* ‘calabash’ > *kót nó:no* ‘milk calabash’.

8.7.1 Possessive phrases

The PosL is used when a noun is modified by a NP: *ma:ndá=kə dən*¹⁶ ‘civil war’, *lit.* ‘war of house’; *səŋwa:ri kə mumtsá* ‘chief of masquerades’.

The PosL is also a means of producing compound words: *mur=kə dənès*, ‘head of the family’, *lit.* ‘man of the house’; *mur=kə zùkn* ‘sorcerer’, *lit.* ‘man of medicine’.

The pronominal nature of the PosL appears in the following example where *kə* stands for the qualified noun, with the meaning ‘that/those of X’. In its pronominal form, the PosL is accentuated and the initial /*k*/ remains unchanged.

Ex 31. *kó:dzàngjó:* *já:* *tá* *wò* *tán* *tʃa:*

<i>kə</i>	<i>gùŋ</i>
POS.L	king

lá:r *-dí* *har* [...]
 every_day 3SG.COND go 3SG.FUT go.INCH put take -CTP until
 Every day, if he went, he would go and pick the king's [groundnuts] and take them home and then...

¹⁴ Glossed as PTCL.SYNT (\rx) and POS (\ge) in the corpus.

¹⁵ When the possessed NP is omitted, it produces the anaphoric pronominal form of the Possessive Link, e.g. *kə Álí*, ‘that of Ali’. Cf. 8.7.1

¹⁶ The rule *k > y* applies yielding [*ma:ndáyə dən*].

8.7.2 Adjectival phrases

The PosL is used to provide a noun with an AP modifier: *lât=ká mu:ri* ‘new leather’.

8.7.3 Ordinal numerals

Ordinal numbers are constructed with a cardinal number in the indefinite form following the pronominal PosL: *ká nàmbóni* ‘the first one’; *ká mbátmi* ‘the second one’, etc. “First” in a temporal sense uses the words *kéni* ‘front’ (*guṅdā=ká ká kéni* ‘the first chieftaincy’) or *fá:ri* ‘beginning’ borrowed from Hausa (*ká fá:ri=kà tákân=wà:sàṅ* ‘the first to appear’).

8.7.4 Relative constructions

The relative marker is *da* (REL1) or its variant *dan* (REL2). The structure of the relative clause modifier is: <Noun^[+def] *da(n)* ...>. The final *-n* assimilates to a following velar (*dan* > *danj*) or bilabial (*dan* > *dam*), yielding the three variants: *dan* /*danj*/*dam*.

Any NP in the relative clause that is coreferential with the relativized NP is deleted. This applies to subject and direct object NPs.

Ex 32. *ni:-ê:s=kān-in¹⁷* *dan* *tjá:ji* *kān* *zà*
 girl-ANAPH=COP2-PROX REL2 IPF.ITER carry water
 Here is the girl who carries the water.

Ex 33. *zà-i=kān-in¹⁸* *dan* *ni:-ê:s* (*á*) *lǎ:r* *túr=wôs* *mān-dí*
 water-DEF=COP2-PROX REL2 girl-ANAPH 3SG.AOR take_to husband=3SG.POS DAT-DIR
 Here is the water that the girl took to her husband.

However, if the deleted NP is [+human], it is replaced by a resumptive pronoun.

Ex 34. *mur-í:* *dan* *mə* *jél* *=tə* [...]
 man-PROX REL2 1SG.AOR see =3SG.OBJ
 This man that I saw...

If the deleted NP is a Locative, it is replaced by the resumptive locative pronoun =*káj*:

Ex 35. *dān-ès=kān-in* *dan* *nê:s* *lǎ:r* *zà* *=káj¹⁹*
 house-ANAPH=COP2-PROX REL2 girl.ANAPH take_to water =ANAPH
 Here is the house that the girl brought water to.

9 Adjectives

9.1 Morphology

Adjectives are a nounlike category. They cannot be combined with a negative marker, and comparison is not expressed morphologically on the adjective (cf. 9.7 below). They have a plural and a definite form whose affixes can be combined to yield four forms. We may take the adjective ‘evil’ as an example:

	lexical	definite
singular	<i>kúskə</i>	<i>kú:ji</i>
plural	<i>kusúṅsə</i>	<i>kusúṅji</i>

¹⁷ [*nê:skānín*].

¹⁸ [*zèjyānín*].

¹⁹ [*zàyáj*].

Adjectives with a plural form:

	singular	plural
‘big’	<i>dàllák, dàllí</i>	<i>dàlláŋsə, dàlláŋfi</i>
‘old’	<i>gə:ri</i>	<i>gə:ráŋsə, gə:ráŋfi</i>
‘clipped’	<i>ndúri</i>	<i>ndurúŋsə, ndurúŋfi</i>
‘big’	<i>vàri</i>	<i>vàràŋsə, vərəŋfi</i>
‘female’	<i>tjár</i>	<i>tjáráŋsə</i>
‘young, small’	<i>ŋɑ:, ŋɑ:ní</i>	<i>mə:ri, mə:ri-mə:ri</i>
‘old’	<i>ndótsə, ndwá:tsə</i>	<i>ndwatsáŋsə, ndwatsáŋfi</i>
‘bad’	<i>kúskə</i>	<i>kusúŋsə, kusúŋfi</i>

9.2 Syntax

Adjectives appear as modifiers in a NP and cannot be its head (except superficially when the head noun is elliptical). Their number feature comes from agreement with the noun they modify, whereas nouns get number from their referential function. When they operate as noun modifiers, adjectives can be simply juxtaposed to the left of the noun: <Adj N>, or appear to the right and be introduced by Possessive Link: <N=kə Adj>. The PosL structure is not used with plural adjectives.

<i>dàllá firáŋ</i>	<i>ndurúŋsə²⁰ jakndí</i>	<i>lât=kə mu:ri</i>
‘a big stick’	‘short(-legged) pots’	‘new leather’

The PosL can be omitted, but it leaves behind a floating tone that changes the last tone of an all-M-tone noun to Rising: e.g. *ŋɑ:* ‘child’; *ŋɑ:=kə fjà:li* > *ŋǎ: fjà:li* ‘a lucky child’ (*lit.* ‘child of white’).

The modified noun can be omitted leaving the PosL as head of the NP: *kə vərə* ‘a big one’.

When they function as predicates, adjectives use the PTCL.PRED *nə*, and optionally the verb *ji* ‘be’:

	modifier	predicate
singular	<i>kúskə zɑ:r</i> ‘evil man’	<i>D. nə kú:fi</i> ‘D. is evil’
plural	<i>kusúŋsə zàrsə</i> ‘evil people’	<i>zàrsə tji nə kusúŋfi</i> ‘people are evil’

9.3 Nonderived adjectives

Nonderived, “pure” adjectives in *Zaar* are no more than 25 in number. Semantically, “pure” adjectives can be subcategorized into:

Colour (4): These four adjectives have a reduplicated form with an attenuative meaning, which can be translated into English by an « *-ish* » suffix.

	singular	plural	derived form
‘black’	<i>dʒi:</i>	<i>dʒiŋsə</i>	<i>dʒi:-dʒi:</i>
‘white’	<i>fjà:li</i>	<i>fjaláŋsə</i>	<i>fjà:li- fjà:li</i>
‘red’	<i>zèli</i>	<i>zèlàŋsə</i>	<i>zèli-zèli</i>
‘variegated’	<i>mbótji</i>	<i>mbótji</i>	<i>mbótji-mbótji</i>

²⁰ *ndúri* (pl. *ndurúŋsə*) ‘shortened, abnormally short’.

Size, shape (9): *dàdà:fi* / *dàdà:s* ‘big’; *dàllí* / *dàllák* ‘tall’; *vàri* ‘big, important’; *ndúri* ‘abnormally short, broken, shortened’; *ngótse* / *ngóðziki* ‘large (animal)’; *vàti* ‘void’; *dàlfi* ‘shallow’; *fóptân*, ‘thin’; *wókfí* ‘rough’.

Moral/human qualities (3): *kúskə* ‘evil’; *mbok* ‘cantankerous’; *múli* ‘naked’;

Others (9): *mbóri* ‘under-cooked (flour)’; *gwà:mi* ‘under-cooked (meat), premature’; *la:mi* ‘insipid’; *má:ki* ‘dirty’; *na:-tsà:dej* (< Hausa) ‘expensive’; *mbuni* ‘good’; *mu:ri* ‘new’; *ndwátsə* ‘old’; *ndzú:li* ‘pure’.

9.4 Compound adjectives of colour

These adjectives are compounds formed with the word ‘water’ followed by a term characteristic of a certain colour.

	singular	literal meaning
‘blue’	<i>zək-gàlú:ra</i>	‘water-of-blue’ ²¹
‘dark brown’	<i>zək-nǎlle</i>	‘water-of-henna’
‘yellow’	<i>zək-ra:s</i>	‘water-of-locust-bean tree’
‘green’	<i>zək-pá:tsə</i>	‘water-of-leaf’

9.5 Verbal Adjectives

Adjectives can be derived from verbs of quality through a *-ni* / *-fi* suffix. They only function as noun modifiers in a genitive construction: *ɲalák* ‘be smooth’ > *ɲalákni* > *pǔ:s ɲalákni* ‘a smooth stone’. Some Verbal Adjectives have a plural form: *ngomdá* ‘be crooked’ > *ngómɗi* (pl. *ngomɗánfi*) ‘crooked’.

9.6 Verbal Nouns

A Verbal Noun (NV) can be used as a noun modifier, in the same function as an adjective. It takes the genitive construction: *sakát* ‘be clever’ > *sakátkân*, ‘cleverness’: *zǎ:r sakátkân* ‘a clever man’ (lit. ‘a man of cleverness’).

9.7 Comparison

Comparison is not marked on the adjective, but is expressed through a syntactic construction using the verb *mop* ‘exceed’ with the term of comparison (the quality) as a (Verbal) Noun: < X *mop* Y Z_[quality] > ‘X exceeds Y in Z_[quality]’.

Ex 36. *dí:la* *mòp* *zá:ki* *sakát-káni=ò:*
 Jackal exceed Lion be_clever-NMLZ-FCT
 Jackal is wiser than Lion (lit. Jackal exceeds Lion in wisdom).

10 Pronouns

10.1 Independant pronouns (IDP)

	Singular	Plural
1	<i>mjá:ni</i>	<i>mjà:ní</i>
2	<i>kjá:ni</i>	<i>kjà:ní</i>
3	<i>já:ni</i>	<i>jà:fi</i>

²¹ *gàlú:ra*: name of a chemical blue dye common in Northern Nigerian markets.

10.2 Object pronouns (OBJ)

10.2.1 Form

	Singular	Plural
1	=ə m	= mí
2	= kə	=- kí
3	= tə	= fí

10.2.2 Tones

DO pronouns have mid tone in the singular and high tone in the plural.

<i>jel</i> 'see'	Singular		Plural	
1	à: <i>jel=əm</i>	[<i>jeləm</i>]	à: <i>jel=mí</i>	[<i>jelmí</i>]
2	à: <i>jel=kə</i>	[<i>jelyə</i>]	à: <i>jel=kí</i>	[<i>jelkí</i>]
3	à: <i>jel=tə</i>	[<i>jeltə</i>]	à: <i>jel=fí</i>	[<i>jelfí</i>]

A final L tone spreads from the verb to the M tone of a singular DO.

<i>vər</i> 'give'	Singular		Plural	
1	á <i>vər=əm</i>	[<i>vərəm</i>]	á <i>vər=mí</i>	[<i>vərmí</i>]
2	á <i>vər=kə</i>	[<i>vəryə</i>]	á <i>vər=kí</i>	[<i>vərkí</i>]
3	á <i>vər=tə</i>	[<i>vərtə</i>]	á <i>vər=fí</i>	[<i>vərfí</i>]

10.3 Possessive Pronouns

Possessive pronouns have two forms, one suffixed to the PosL *kə/gə*, and another suffixed to the possessed noun.

10.3.1 Forms with *kə-/gə-*

This heavy form is a full word, has a uniform L tone, and can be used as head of a NP.

	singular	plural
1	<i>gətn</i>	<i>gwəpm</i>
2	<i>gwà:</i>	<i>gwà:n</i>
3	<i>gwòs</i>	<i>gwà:səŋ</i>

10.3.2 Forms without *kə-/gə-*

This light form cliticizes to the qualified noun. Omission of *gə-* leaves behind a floating H tone.

	singular	plural
1	=(a) <i>tn</i>	= <i>wəpm</i>
2	= <i>wə:</i>	= <i>wə:n</i>
3	= <i>was</i>	= <i>wə:sən</i>

For the 1s pronoun, the tone of the genitive PNG is L after a L tone:

<i>bəndə</i> 'pot'	<i>nábəm</i> 'butter'
<i>bəndətn</i>	<i>nábəmàtn</i>

F elsewhere:

<i>túr</i> 'husband'	<i>gəri</i> 'fowl'
<i>túràtn</i>	<i>gèràtn</i>

Some exceptions come from resyllabification:

<i>ngátn</i> 'thing'	<i>səbər</i> 'knife'	<i>rə:</i> 'heart'
<i>ngátàtn</i>	<i>səbràtn</i>	<i>rə:tn</i>

Only the first tone of contour tones is kept:

<i>kê:m</i> ‘ear’	<i>dwǎ:m</i> ‘metal’
<i>ké:mâdn</i>	<i>dwa:mâdn</i>

For the other persons, the tone of the suffix is L after a L tone:

	<i>bëndà</i> ‘pot’	<i>dàn</i> ‘compound’
2s	<i>bëndàwà:</i>	<i>dànwà:</i>
3p	<i>bëndàwà:səŋ</i>	<i>dànwà:səŋ</i>

and after falling melodies (H-L, H-M and Falling):

	<i>nábàm</i> ‘butter’	<i>kádi</i> ‘dog’	<i>lút</i> = ‘rope’
2s	<i>nábàmwà:</i>	<i>kádiwà:</i>	<i>lútwà:</i>
3p	<i>nábàmwà:səŋ</i>	<i>kádiwà:səŋ</i>	<i>lútwà:səŋ</i>

It is Falling after a H tone:

	<i>túr</i> ‘husband’
2s	<i>túrwà:</i>
3p	<i>túrwà:səŋ</i>

and after rising melodies (L-M, M-H and Rising):

	<i>bùtí</i> ‘okra’	<i>kari</i> ‘monkey sp.’	<i>dwǎ:m</i> ‘money’
2s	<i>bùtíwâ:</i>	<i>kariwâ:</i>	<i>dwǎ:mwâ:</i>
3p	<i>bùtíwâ:səŋ</i>	<i>kariwâ:səŋ</i>	<i>dwǎ:mwâ:səŋ</i>

As final M tones become rising with a floating H tone, the rule applies to the resulting melody:

	<i>gá:m</i> ‘head’	<i>rá:</i> ‘heart’
2s	<i>gǎ:mwâ:</i>	<i>rǎ:wâ:</i>
3p	<i>gǎ:mwâ:səŋ</i>	<i>rǎ:wâ:səŋ</i>

10.3.3 Exceptions

Some possessives (inherent possessions) have an irregular form:

	<i>da:</i> ‘father’	<i>na:</i> ‘mother’	<i>jês</i> ‘brother’	<i>wa:tsə</i> ‘sister’
1s	<i>dà:gətn</i>	<i>ná:gətn</i>	<i>jésətn</i>	<i>wa:tsətn</i>
2s	<i>dà:gwà:</i>	<i>ná:gwà:</i>	<i>jéswà:</i>	<i>wa:tsawà:</i>
3s	<i>dà:gwòs</i>	<i>ná:gwòs</i>	<i>jéswòs</i>	<i>wa:tsawos, wa:tsafi</i>
1s	<i>dà:gwòpm</i>	<i>ná:gwòpm</i>	<i>jéswòpm</i>	<i>wa:tsawopm</i>
2p	<i>dà:wà:n</i>	<i>nawa:n</i>	<i>jéswà:n</i>	<i>wa:tsawà:n</i>
3p	<i>dà:wà:səŋ</i>	<i>nawa:səŋ</i>	<i>jéswà:səŋ</i>	<i>wa:tsawà:səŋ</i>

	<i>kâ:m</i> ‘friend’	<i>kăn</i> ‘uncle’	<i>dàn</i> ‘house’ / <i>vì:</i> ‘mouth’
1s	<i>kamsətn</i>	<i>kanətn</i>	<i>da:m dən/vì:</i>
2s	<i>kamsə:</i>	<i>kaná:</i>	<i>da:ɣə dən/vì:</i>
3s	<i>kamsafi</i>	<i>kánwòs, kanáji</i>	<i>da:tə dən/vì:</i>
1s	<i>kamsawopm</i>	<i>kánwòpm</i>	<i>da:mí dən/vì:</i>
2p	<i>kamsawà:n</i>	<i>kánwâ:n</i>	<i>da:kí dən/vì:</i>
3p	<i>kamsawà:səŋ</i>	<i>kánwâ:səŋ</i>	<i>da:jí dən/vì:</i>

10.4 Reflexive pronouns

	Singular	Plural
1	<i>gamətn</i>	<i>gamawopm</i>
2	<i>gama:</i>	<i>gamawà:n</i>
3	<i>gamas, gamafi</i>	<i>gamawà:səŋ</i>

10.5 The Reciprocal

The English ‘each other, one another’ is expressed by *ɓəŋsə=wà:səŋ* (lit. ‘their bodies’) in *Zaar*.

Ex 37. *mán* *d̩̀à:-kàn* *mó:ta* *ɗan* *tà:* *sa:bá-í:* *tá* *ɓ̀à̀ǹ̩sà̀wà̀:sà̀ǹ̩*
 people.POS drive-NMLZ car REL 3PL.PFV be_used-RES with each_other
 Drivers who were used to each other [...]

10.6 The locative resumptive pronoun *káj*

Káj appears as a resumptive substitute for a locative . Its allophones are *káɗ/ngáɗ/yáɗ*. It will appear in a relative clause at the place where the relativized antecedent stood:

Ex 38. *lâp* *wón* *ɗán* *tá* *t̩̀* =*káj* *mjá:* *sú:*
 place QLT REL 3PL.AOR go =LOC 1SG.IPFV want
mà *lá:p=fí* *h̩̀ǹ̩-ò:*
 1SG.SBJV follow=3PL.OBJ NEG2-FCT
 The place they went to, I didn't want to follow them there.

Likewise in focus constructions:

Ex 39. *nə* *ɲantsá* *wón* *ɗan* *t̩̀ǎ:* *dzák* *tu-ês²²j* =*káj*
 COP1 tree INDEF REL 3PL.IPFV slaughter animal.DEF =LOC
 It's a tree which they sacrificed animals on.

11 Prepositions

Prepositions can be divided into simple and compound. Some simple *Zaar* prepositions are borrowed from Hausa (= HAU in the tables).

<i>á, ká, bas</i>	‘at’
<i>dàgà</i>	‘from’ (HAU)
<i>ɗa</i>	‘at’
<i>ɗan</i>	‘like’
<i>gámé</i>	‘with’ (HAU)
<i>kàmár</i>	‘like’ (HAU)
<i>mel</i>	‘near’
<i>ná</i>	‘for, towards’
<i>tsàkà:ní</i>	‘between’ (HAU)
<i>zúwa</i>	‘towards’ (HAU)

Ká has three allophones: *ká/yá/ɲá*. *Bas* is the pre-pronominal form of the same morpheme in the continuous TAM marker.

Ex 40. *ɲê:s* *má:* *t̩̀j* *-bas* *=tə* *sú:-kân*
 girl.ANAPH too 3SG.BE -AT =3SG love-NMLZ
 The girl too, she loved him (*lit.* ‘she was loving him’).

Compound prepositions are derived from nouns, some of which are no longer in used, with the structure (*á*) + N + (*ká*) and also have an adverbial use.

<i>gà:m</i>	‘head’	<i>(á) gam</i>	‘on top of’
<i>dù:l</i>	‘heritage’	<i>(á) dùl</i>	‘on top of’
<i>gès</i>	‘bottom’	<i>(á) gès</i>	‘under’
<i>dùr</i>	‘occasion’	<i>(á) dùr yá</i>	‘because of’
		<i>(á) gip</i>	‘inside’
<i>kên</i>	‘face’	<i>(á) kên</i>	‘in front of’
<i>kâ:r</i>	‘back’	<i>(á) kâ:r</i>	‘behind’
<i>t̩̀fokn</i>	‘sky’	<i>(á) t̩̀fokn</i>	‘on top of’
<i>te:</i>	‘place’	<i>(á) te:</i>	‘by, near’
<i>làɲsá</i>	‘side’	<i>(á) láɲ</i>	‘near (road, river)’
<i>ɓ̀j:</i>	‘body’	<i>(á) ɓ̀j</i>	‘in the middle of’

²² [*> t̩̀ò:skáj*]

<i>vi:</i>	‘mouth’	(á) ɓàk	‘deep in the middle of’
		(á) vi:	‘near (road, river)’

12 Adverbs

12.1 Time

Deictic

<i>dangəni</i>	‘now’
<i>dálâŋsán, dálá:səŋənan</i>	‘right now’
<i>tàj dzàngí:, tàj vɪndí:</i>	‘the day before yesterday’
<i>nà:já:wón</i>	‘yesterday’
<i>já:wón</i>	‘today’
<i>ɗǎ:n</i>	‘tomorrow’
<i>dī:ní</i>	‘the day after tomorrow’
<i>ɗɪndi, təj ɗɪni</i>	‘last year’
<i>ɗɪnəŋən</i>	‘this year’
<i>dī:n, dī:n ɗɪni</i>	‘next year’

Others

<i>ɗada, sáɗɗada</i>	‘again’
<i>ba:ndəŋ</i>	‘formerly’
<i>gàlàs</i>	‘later’
<i>nga:láj</i>	‘later on’
<i>túntún</i>	‘long ago’ (HAU)

12.2 Place

Deictic

<i>dū:n, dú:ni</i>	‘here’
<i>dáni, dān, ɗadān, ɗadáni</i>	‘there’
<i>dí:</i>	‘over there, far’

Others

<i>báɓəŋ</i>	‘outside’
<i>dù:li</i>	‘on top’
<i>dó:ngáj</i>	‘far away’
<i>gà:mì</i>	‘above, uphill, up west’
<i>gəfi</i>	‘under, downhill’
<i>ká:ri</i>	‘back, last’
<i>kéni</i>	‘in front, first’
<i>laŋsá</i>	‘near’
<i>laŋfí</i>	‘aside’
<i>mel</i>	‘near’
<i>napti</i>	‘left’
<i>vòj</i>	‘below’
<i>jâ:ɤ</i>	‘on the ground’
<i>ɓari</i>	‘across’

12.3 Manner

<i>anihí</i>	‘really’ (HAU)
<i>ɗaŋ</i>	‘too’
<i>de:dé:</i>	‘exactly’ (HAU)
<i>ɗzòndzòm(i),</i>	‘truly’
<i>faŋtaŋ</i>	
<i>mari</i>	‘differently’
<i>móták</i>	‘quickly’
<i>na: tá:dí</i>	‘jokingly’ (HAU)
<i>na: za:ri</i>	‘properly’ (HAU)

<i>nda:rá</i>	‘well’
<i>sòséj</i>	‘completely, well’ (HAU)
<i>tà:ré</i>	‘together’ (HAU)
<i>ʒík, ʒíkáj</i>	‘thus’
<i>ʒíp</i>	‘necessarily’
<i>tsananin</i>	‘extremely’ (HAU)
<i>tsán, tsaní</i>	‘like this’
<i>wobát</i>	‘suddenly, unexpectedly’

12.5 Quantitative/qualitative modulation

<i>ájnun</i>	‘very much, truly’ (HAU)
<i>bét</i>	‘all, completely’
<i>burúk</i>	‘all’
<i>dàmàj</i>	‘plenty’ (HAU)
<i>debát</i>	‘all’
<i>gì:ri</i>	‘properly’
<i>kadé</i>	‘only’ (HAU)
<i>káp, kakáp</i>	‘every, all’
<i>kúrúm</i>	‘merely’
<i>káfe-káfe</i>	‘of all sorts’ (HAU)
<i>káwâj</i>	‘only’ (HAU)
<i>mondá</i>	‘much, many’
<i>náŋ</i>	‘very’
<i>nɔ́gwâ:tn, nɔ́gwátn nɔ́gwătn,</i> <i>(ŋa:) nɔ́zú:, nɔ́gwá:to</i>	‘a little’
<i>zalla</i>	‘only, alone’

13 Ideophones

The greater part of adverbs are ideophones, a large class (355 items in the lexicon) set apart by its phonological and syntactic properties. Most ideophones are associated with one word (verb or adjective): *à: ʒoptí: pés* ‘he washed it clean’; *á dí:mí: péllân* ‘he jumped up and down like a monkey’. They are frequently reduplicated: *nə zèli nɔ́zu:-nɔ́zú:* ‘it’s a bright red’; *à: wuʔ ga:mí: gwalaŋ-gwalaŋ* ‘he shaved his head clean’.

14 External Derivation

14.1 Nominal derivation

A few abstract nouns are derived from other nouns or verbs through a *-dǎ* suffix and LH tones:

Verb	Abstract noun
<i>kun</i> ‘get dry’	<i>kundǎ</i> ‘dryness’
<i>ʒ²³</i>	<i>dja:kndǎ</i> ‘dampness’
<i>gùŋ</i> ‘chief’	<i>gunǎ</i> ‘chiefdom’

Other derivations are less regular:

Verb	Abstract noun
<i>fol</i> ‘to slough’	<i>fóli</i> ‘snake’s slough’
<i>kaptǎ</i> ‘to itch’	<i>káptǎ</i> ‘chaff’ ²⁴
<i>kír</i> ‘to run’	<i>kítâr</i> ‘running’
<i>lut</i> ‘to tear off bark of tree’	<i>lût</i> ‘bark rope’

²³ The original verb is unknown, but cf. the derived Verbal Adjective *djá:ki* ‘damp’.

²⁴ The direction of derivation is probably the reverse here, with the verb *kaptǎ*, ‘to itch’, deriving from *káptǎ*, ‘chaff, seed husk’, a very irritating substance.

wuɫ	‘to shave’	wútká	‘rasor’
------------	------------	--------------	---------

14.2 Adjectival derivation

Adjectives can be derived from verbs of quality using a *-ni /-fi* suffix.

Verb		Adj	
ras	‘to rot’	ráfi	‘rotten’
kun	‘to dry’	kúɲni (pl. kúɲfi)	‘dry’
fupm	‘to be tall’	fúɲni (pl. fúɲmsə, fúɲmfi)	‘long, tall’

14.3 Adverbial derivation

Some adverbs are derived from nouns using an *-i* suffix or through apotony.

ɬokn	‘sky’	ɬókni	‘above’
dù:l	‘heritage’	dù:li	‘on top’
gà:m	‘head’	gà:mi	‘on top, uphill’
gàs	‘bottom’	gàfi	‘under, downhill’
kâ:r	‘back’	kâ:ri	‘at the back, behind’
kên	‘face’	kéni, kên	‘in front, forward’
làɲsá	‘side’	lanfi	‘aside’

Others are derived from verbs through reduplication:

fúɲm	‘be tall, long, far’	fupm-fúɲm	‘very far’
ɬja:	‘be strong, hard’	ɬja:-ɬjâ:	‘absolutely still’

15 Verb series

Series of verbs are used to introduce aspectual or modal specifications, e.g. inception, iteration, completion, capability etc. The first verb, acting as a pseudo-auxiliary²⁵, functions as a main verb taking the second verb and its complements as a clausal complement. There exist three types of clausal complements: (i) finite verbs (V), i.e. with TAM marking; (ii) infinitives²⁶, i.e. finite verbs without TAM marking; (iii) nonfinite, nominalized verbs (NV) and their possessive complements.

15.1 Finite complements

The person in the TAM of the clausal complement (second verb) repeats that of the main verb, or pseudo-auxiliary:

Ex 41.

ma	ká:m	ma	ɬə	ɖa	námɬsə	-i	háɲ	//
1SG.FUT	be_able	1SG.FUT	go	at	bush	-INDF	NEG2	//

 I cannot go into the bush again. (SAY_BC_Conv_02_SP2_010)

15.2 Infinitive complements

Ex 42.

ɖan	má:	bà:	ɬjá:	ká:m	/	ɖu	kóna	háɲ	má:	//
as	even	NEG1	3SG.IPFV	be_able	/	beat	corner_kick	NEG2	even	//

 [...] as he cannot even shoot a corner kick. (SAY_BC_Conv_03_SP1_732)

²⁵ These verbs cannot be considered auxiliaries as they are not defective, but full verbs with hardly any semantic bleaching.

²⁶ Cf. Newman (2000) where this term was first introduced to characterize equivalent Hausa constructions. These forms are called ‘Forme Verbale Libre’ by Gouffé (1979).

15.3 Nominalized complements

Ex 43. *tá*

<i>ndâ:</i>	<i>lâ:r</i>	<i>-kâni</i>
3PL.SBJ.AOR	start	bring

sambâr *-sə* *-dí*
stranger -PL -CTP
they started bringing guests (SAY_BC_Conv_03_SP2_040)

15.4 Stacking

The corpus has some cases of stacking with a series of more than two verbs. The example below has four:

Ex 44. *longa* / *tə*

<i>ga:-í:</i>	<i>bâ</i>
leave-RES	indeed

<i>tə</i>	<i>mandá</i>	<i>fu:</i>
go	do_again	tell

na: *kâm* =*wos* *dǎ:r* //
type_of friend =3SG.GEN lizard //
Rabbit left indeed and went and started telling his friend Lizard //(SAY_BC_narr_01_SP1_156-8)

15.5 Serializing verbs

Below are the serializing verbs (glossed AUX) that are found in the corpus with their original lexical meaning within brackets when it differs from that of the auxiliary:

da:fá ‘keep on doing’ (< Hausa *dá:fà:*); *dap* ‘start’ (< ‘follow’); *dingá* (< Hausa *díngà:*) ‘have already’; *djá:* (< Hausa *ǵijà:*) ‘be able’; *fa:rá* (< Hausa *fá:rà:*) ‘start’; *ban* ‘keep doing’ (< ‘finish’); *ká:m* ‘be able’; *mán, mandá* ‘start’ (< ‘come’); *na:* ‘start’ (< ‘become’); *nda* ‘start doing’ (< ‘enter’); *nga:* ‘start’; *rigá* (< Hausa *rigá:*) ‘have already’; *sa:ké* (< Hausa *sá:kè:*) ‘do again’ (< ‘repeat’); *tə* ‘go and...’; *ǵiká* (< Hausa *cíkà:*) ‘do a lot’

Zaar borrows heavily from the equivalent Hausa auxiliary verbs, with a few cases of suppletion, e.g. *djá:* (< Hausa *ijà:*), duplicating and almost superseding the original *Zaar* term *ká:m* ‘be able’, and *fa:rá* (< Hau *fá:rà:*) duplicating *nda* ‘start’:

Ex 45. *jè:* *káwáj*

<i>mà:</i>	<i>dap</i>	<i>má</i>	<i>nom</i>
1PL.PFV	follow	1PLAOR	take

háŋ /
PN.TAM merely NEG2 /
we haven't even started to fight [...] (SAY_BC_narr_03_SP1_559)

Ex 46. *wò*

<i>fa:rá</i>	<i>vat</i>	<i>-kâni</i>
start	blow	-NMLZ

 //
3SG.FUT start blow -NMLZ //
He will start blowing. (SAY_BC_narr_03_SP1_084)

NB: pseudo-auxiliaries borrowed from Hausa are systematically associated with the nonfinite construction. A notable exception is the verb *djá:*, very frequent in the corpus and phonologically well integrated into *Zaar* (*ǵijà:* > *djá:*), which uses the finite construction.

16 Complex sentences

Complexification in *Zaar* does not necessarily involve conjunctions. TAMs and their combinations can, in a paratactic succession of clauses, indicate subordination.

16.1 Parataxis and subordination

An example of a complex paratactic construction is given in (44) where the initial clause is a temporal/conditional adverbial subordinate clause with no conjunction, marked only by the Conditional TAM. The following Subjunctives indicate successive habitual actions.

Ex 47.

tò:	/	mjà:ní	/	lâp	já:	ta:	-í:	/
well	/	1PL	/	place	3SG.COND	cut	-RES	/
tò:	má	ta	-í:	ná	ɲamtsá	nat	-kání	//
well	1PL.AOR	go	-RES	for	wood	tie	-NMLZ	//
má	nat	ɲamtsá	-dí	/				
1PL.AOR	tie	wood	-CTP	/				
tò:	má	máni	má	man	/	tsátn	-ni	//
well	1PL.AOR	come	1PL.AOR	come	/	sit	-INCH	//

Well, we, if/when the day breaks, well we go and collect wood. [When] we [have] collect[ed] the wood, we come back and sit down. (SAY_BC_Conv_02_SP1_014-17)

16.2 Conjunctions: synonymy, polysemy, and polyfunctionality

Zaar conjunctions are:

- àmmá: ‘but’
- bandanɲ ‘all the more so if’
- da, dan: ‘as’ (temporal)
- dan kutu, dan kó: tu ‘as if’
- já:n (cf. 3sg, PRO.IDP já:n, já:ni), ín, idán (< Hausa ín, idán) ‘if’
- kándá, hár (< Hausa hář) ‘until’, ‘so that’
- kó: (kuma) (< Hausa kó: (kúma) ‘or’
- sábo: tu (cf. Hausa sábo: dà), dón (< Hausa dón, dò:mín) ‘because’
- tá, kándá, séi (< Hausa sái) ‘then’
- tún dan ‘since’ (causal); cf. Hausa tún dà

Many are Hausa loanwords, e.g. séi, tun, ín/idán, àmmá:, kó:, but a few are stock Zaar words, e.g. da, dan, kándá, (ku)tu, bandanɲ. Among these, da and danɲ are highly polysemic, with semantic overlap and polyfunctionality²⁷. One might suspect grammaticalization and convergence of two phonetically similar prepositions: da ‘at’ and dan ‘like’:

DA	PREP: da ‘at’	
	COP3: da ‘there is’	
	ADV: da / dan ‘again’	
	CONJ: da / dan ‘as (temporal)’	
	PTCL.REL: da / dan ‘that, which’	
	PRO.REL (g)jódan ‘which, who’	
	ADV.REL jáddijó:dan ‘the way that, how’	
	COMP dan kutu, dan tu kó: ‘as if’	
	PREP dan ‘like’	DAN

16.3 Coordination

Although additive coordination (“X and Y”) is present in the nominal system with the conjunction tá, in the case of clauses, coordination is generally obtained through parataxis. However, the discourse particle kúma, translated as ‘also’, may appear initially in a speech unit, and work as a linking term within the preamble:

Ex 48.

bà:	má:	ta	te:	dáni	háɲ	//
NEG1	1SG.PFV	go	at	there	NEG2	//

²⁷ Cf. (Ex 53) for an illustration of the polyfunctionality of the word dan.

kúmá	<i>ma</i>	<i>ɬə</i>	/	<i>ɬet</i>	<i>lɔp</i>	<i>ká</i>	<i>kullá</i>	<i>kájá:</i>	<i>hán</i>	<i>-o:</i>	/
also	1SG.FUT	go	/	ask	place	POS	Kulla	Kaya	NEG	-FCT	/

I haven't been there. And I won't go and ask for the place of Kulla Kaya.
(SAY_BC_Conv_03_SP1_137-140)

Occasionally, when the speech unit introduced by *kúmá* is linked intonationally with the previous one, the particle may be interpreted as a conjunction, and the whole structure as coordinating:

Ex 49. **dó:lé:** *sé:* *mjà:* *ɬə* *ná* / *púsdun* /
seriously up_to 1PL.COND go for / Pusdung /

kúmá	<i>sé:</i>	<i>mjà:</i>	<i>ɬə</i>	<i>mbút</i>	<i>-í:</i>	//
too	up_to	1PL.COND	go	spend_night	-RES	//

We must go to Pusdung and we should spend the night there. (SAY_BC_conv_01_SP2_231)

Apart from paratactic constructions without explicit coordination, oppositive and alternative coordination may use conjunctions borrowed from Hausa: a) *àmá:* (< Hausa *àmmá:*) ‘but’:

Ex 50. *zɑ:r* *wò* *djá:* *kap* *gàt* /
human 3SG.SBJ.FUT be_able take wife /

àmá:	<i>tá</i>	<i>man</i>	<i>bəl</i>	<i>-í:</i>	<i>tá</i>	<i>gàt</i>	<i>-ês</i>
but	3PL.SBJ.FUT	come	dig	-RES	with	wife	-DEF

kúmá	<i>ɬíká</i>	<i>tsátn</i>	<i>-káni</i>	<i>tá</i>	<i>ɲá:</i>	<i>=wos</i>	<i>áj</i>	//
also	3PL.SBJ.CONT	SIT	-NMLZ	with	child	=3SG.POS	eh	//

A man can marry but they may happen to divorce and she will keep her child.
(SAY_BC_Conv_03_SP2_395-6)

b) *kó:* (*kuma*) (< Hausa *kó:* (*kúmá*)) ‘or’

Ex 51. *a* *ban* *-i:* *-a:*
3SG.AOR finish -RES -VRT

ko:	<i>mà</i>	<i>keni</i>	<i>=kaj</i>	<i>-a:</i>	<i>sarkinpa:da</i>	//
or	1PL.SBJV	forward	=ANAPH	-VRT	sarkin_pada	//

Is it finished or shall we go on SarkinPada? (SAY_BC_Conv_02_SP2_091)

16.4 Complementation

Verbs expressing perception (*jel* ‘see’, *wum* ‘hear, perceive’), intellectual processes (*sô:* ‘want, like’, *jisán* ‘know’), speech acts (*wul* ‘say’), etc. can take direct clausal complements, both finite and nominalized. (Ex 52) below shows the verb *wum* with a nominalized clausal complement:

Ex 52. *jè:* **wum** *gwà:* **məs -káni** *gùŋ* *-i* / *á* *vì:* *gàtn* *-a:* //
PN.TAM feel 2SG.GEN die -NMLZ king -DET / at mouth 1sg.pos -VRT //

[you] will hear from me that the chief has died (lit. ‘your death of the king from my mouth’)
(SAY_BC_narr_01_SP1_643-5)

In (53), the verb *ɲal* ‘seek’ takes a series of clausal complements with Subjunctive TAMs (*mà*); the verb *jel* ‘see’ takes a complement clause in the Perfective (*mà*):

Ex 53. *mjà:* **ɲal** / **mà** *da:gé* *-í:* *XX* **mà** *jel* /
1SG.IPFV seek / 1PL.SBJV strive -RES XX 1PL.SBJV see /

mà: *fi* *ànkó* =*wopm* -*í:* /
 1PL.PFV do similar_dressing = 1PL.POS -DIST /
tà *pol* =*mí* =*káj* *á* *ra:* //
 3SG.SBV please = 1PL.OBJ = ANAPH at heart //
 I want us to try hard and see that we wear those same clothes and I would be very happy.
 (SAY_BC_conv_01_SP2_078-82)

Moreover, clausal complements can be introduced by complementizers, e.g. *tu* after the verb *wul* ‘say’:

Ex 54. *tò:* *má* *díngá* =*tà* *jel* -*kàní* *má*

<i>wul</i>	<i>tu</i>
say	OPN

 /
 well 1PL.AOR keep_on =3S.OBJ see -NMLZ 1PL.AOR say OPN /
kúni =*wos* -*án* *á* *ndará* *nán* //
 boy =3SG.POS -PROX 3SG.AOR be_proper really //
 Well we have already seen him and we said that that son of his is very nice.
 (SAY_BC_Conv_02_SP1_097-8)

Another example, with a similitive meaning, involves the verb *jel* ‘see’ and its complementizer *dan kutu* ‘as if’:

Ex 55. *múr* =*wa:* -*í:*

<i>jel</i>	<i>dan</i>	<i>kutu</i>
see	like	AS_IF

 /
 man =2SG.POS -RES see like AS_IF /
tjá: *tji* =*fi* =*was* -*í:* *káwâj* //
 3SG.PFV eat =3PL.OBJ =3SG.POS -RES merely //
 Your man thought that he was just fooling them. (SAY_BC_narr_03_SP1_430-1)

16.5 Subordination

16.5.1 Time

The conjunctions are: *da* / *dan* ‘as’; *kandá* ‘then, until, before’; *tá* ‘then’ (consecutive meaning); *túndan* ‘since’.

dan ‘as’

Ex 56.

<i>dan</i>
rel2

dzàŋ *gí:* *ɔ́ák* /
 like day dist jack /

<i>dan</i>
as

mátájá: *kon* -*án* *mə* *fu:* =*tə* /
 as 1sg.pfv.rem say -pl2 1sg.aor tell =3s.obj /
ra:

<i>da</i>
as

à: *mán* *wum* =*tə* //
 heart as 3SG.PFV come feel =3S.OBJ //
 Like that day as Jack came here, when I told him, then he became angry.
 (SAY_BC_conv_01_SP2_100)

kandá ‘then’

Ex 57. XX *tò:* *á* *man* -*i* /
 XX well 3sg.aor come -spcf /

<i>kandá</i>
then

mjá: *tsátn* -*ni* =*kəní* /
 1pl.ipfv sit -inch cop2 /
má *fi* *gja:* *ŋa:* /
 1PL.AOR do PL3 small /
 Well, she arrives / then we sit down we take a little breakfast (SAY_BC_Conv_02_SP1_031)

túndan ‘since’

Ex 58.

túndan
since

mə **ngúp** **bà:** **má:** **tə** **te:** **đáni** **həŋ** //
1sg.aor start neg1 1sg.pfv go at there neg2 //
Since I was born, I have never been there. (SAY_BC_Conv_03_SP1_135)

16.5.2 Causality

The conjunctions are: **dón**, **sábò:tu** ‘because’; **túndà** / **túndan** ‘since’. They are borrowed from Hausa and have undergone a degree of convergence with the stock *Zaar* conjunction **dan** and the complementizer **tu**, i.e. Hausa **tún dà** > *Zaar* **túndan**; Hausa **sábo: dà** > *Zaar* **sábò:tu**.

sábò:tu ‘because’

Ex 59. **jáddà** **dan** **mjá:** **sú:** / **ngátn** **-êš** **=kandí**

sábò:tu
because_of

 /
how REL2 1SG.IPFV want / thing -DEF =COP2 /
bà: **mjá:** **sú:** / **mə** **dingá** **đu** **-káni** **wurba** //
NEG1 1SG.IPFV want / 1SG.SBJV keep_on kill -NMLZ money //
That’s what I want, because I don’t want to waste money. (SAY_BC_Conv_03_SP1_078)

túndà ‘since’

Ex 60.

tunda
since

à: **da:gé** **=káj** / **bas** **=mə** **káwêj** /
3SG.PFV strive =ANAPH / POS =1SG.OBJ merely /
tu **tjá:** **sú:** **=mí** **-í:** / **ín** **já:** **fa:rá** **-í:** /
OPN 3SG.PFV love =1PL.OBJ -RES / if 3SG.COND start -RES /
tò: **shi** **ke** **nan** / **ma** **đjá:** **ma** **kap** **=tə** **-í:** //
well 3.SG be there / 1SG.FUT be_able 1SG.FUT take =3S.OBJ -RES //
Since he is serious about me, saying that he loves me, well, < that's it >, I can marry him.
(SAY_BC_conv_01_SP2_275)

16.5.3 Purpose

Purpose is mainly expressed through an adverbial clause in the Subjunctive, without a conjunction.

Ex 61. **á** **wul** **tu** **tò:** / **fi** **-án** **-dí**
3sg.aor say comp well / do -prox -dir
ŋa: **laplap** /

tə
3sg.aor

mor **=tə** /
small heavy / please =3s.obj /

tə
3sg.aor

jú# **##** **júkn** **vì:** **-êš** **-í:** **bâ** //
fs ## fill mouth -def -res indeed //
he said, well, pour plenty [of honey] so that it should soothe him [and] f... fill his mouth.
(SAY_BC_narr_01_SP1_084)

The Subjunctive can be reinforced by borrowing the Hausa conjunction **dón**:

Ex 62. **tò:** / **ká** **nger** **=tə** /

dón
because

vòràŋ **-i** /
well / 2PL.FUT cut =3S.OBJ / blood -INDF /

tə
3SG.SBV

ná: **bas** **=mə** //
3SG.SBV remain POS =1SG.OBJ //
Well, kill it so that the blood will stay on me. (SAY_BC_Narr_02_Sp1_105)

16.5.4 Condition

Depending on the context, conditional clauses in *Zaar* can have a conditional ('if...') or a temporal ('when...') meaning. They are characterized by a specific "conditional" TAM (glossed COND) appearing in the protasis.

TAM alone

Ex 63. *éj / kǎ: mán / ká mán fi ma:nda / tá kúni =âtn //*
indeed / 2SG.COND come / 2PL.FUT come do fight / with boy =1SG.POS //
Well if you come, you will fight with my boyfriend. (SAY_BC_conv_01_SP1_071):

This Conditional TAM can be reinforced or replaced by the 3s PRO.IDP *jâ:n* used as a conjunction, or by the conjunction *in / idan* borrowed from Hausa. The two conjunctions (*jân* and *in/idan*) can be combined.

jân

Ex 64. *wéj á / áj jâ:n tá fi -ni ma:nda tá kúni =atn / ba damuwa //*
EVD EH / indeed if 3PL.FUT do -INCH fight with boy =1SG.POS / no problem //
I said, eh ... well, if he fights with my boy, < no problem >. (SAY_BC_conv_01_SP1_076)

TAM + *in*

Ex 65. *tǎ: sú: / in jâ: gamá pé:pa -í:*
3SG.PFV want / if 3SG.COND finish exam -RES
tà tǎ tá pé:pa mai kjau / tà tǎ tu gât //
3SG.SBV go with exam with good / 3SG.SBV go get wife //
He wants, when he finishes the exams, (and) if he gets good results, to go and get a wife.
(SAY_BC_conv_01_SP1_107)

in + jâ:n

Ex 66. *wéj állâ: tò: / in jâ:n nǎ kúni =âtn nda*
EVD god well / if if COP1 boy =1SG.POS enter
tá fi ma:nda tǎim =tǎ ba damuwa //
3PL.SBJ.FUT do fight with =3S.OBJ no problem //
I said, in the name of God, if my boy comes and they fight, < no problem >.
(SAY_BC_conv_01_SP1_090)

16.5.5 Hypothesis

Hypothesis, or counterfactual condition, is expressed in the protasis by a specific TAM, the Counterfactual (CTF). The protasis is preceded by the counterfactual conjunction *dâ:* 'if' borrowed from Hausa:

Ex 67. *dâ: mǐ: ɲal =tǎ gja: ɲa: gèri -sǎ mán tá*
CONJ 1PL.CTF look_for =3S.OBJ PL3 small chicken -PL BEN then
wò pol =fi =káj mop -o: //
3SG.FUT please =3PL.OBJ =ANAPH surpass -FCT //
If we had looked for some chickens for them, then they would have been really happy.
(SAY_BC_Conv_02_SP2_058)

Ex 68. *á ndará / dâ: kǐ: la:tsá -ês -í: kàm dón /*
3SG.SBJ.AOR be_proper / CTF 2SG.CTF pass_by -DEF -RES indeed because /
It would have been better if you had moved on indeed because [...]
(SAY_BC_Conv_03_SP2_104)

16.6 Relative clauses

The relativizer is *da/dan* and its compounds: *jó:dan* ‘which’; *gjó:da(n)*, ‘(the one) who’; *jánda*, *jáddijó:dan* ‘the way in which’²⁸.

Ex 69. *dǎ:r* da *á* *kat* / *kàkàrtfi kàkàrtfi kàkàrtfi* /
 lizard REL1 3SG.AOR drive_away / shuffle shuffle shuffle /
ɬə -án nda -í: gír ngála da lâ:r -i dáđán ndzwǎ:t //
 GO -PROX enter -RES hole crab at river -INDEF again quick //
 Lizard who was plodding along, shuffle shuffle shuffle, managed to slip into Crab’s burrow.
 (SAY_BC_narr_01_SP1_285)

Ex 70. *tà:* *jel tû:* *-sə* / dan *tà:* *má:s dáđán* /
 3PL.PFV see meat -PL / REL2 3PL.PFV die\PLC there /
da tà: ras da jâ:t -i //
 REL1 3PL.PFV rot AT earth -INDF //
 They saw the animals that had died there (and) that had been rotting on the ground.
 (SAY_BC_Narr_02_Sp1_318)

jó:dan (PRO.REL)

Ex 71. *dúk ngátn* jó:dan *jel wò* *fi de:dé: káwêj* / *tá wò fi* //
 all thing which see 3SG.FUT do exact merely / then 3SG.FUT do //
 All the things that he thinks will be good for him, he will then do them.
 (SAY_BC_conv_01_SP2_183)

gjó:dan (PRO.REL)

Ex 72. *bà: tfi tá* gjó:dan *wò te:maké =fi háŋ* /
 NEG1 3SG.SBJ.BE with those_who 3SG.FUT help =3PL.OBJ NEG2 /
 He doesn’t have anyone who will help him. (SAY_BC_conv_01_SP2_257)

jáddijó:dan (ADV.REL)

Ex 73. *mjà: ɬə -í: má ɬə paŋ má jel* jáddijó:dan *wò ngap* /
 1PL.COND go -RES 1PL.FUT go inspect 1PL.FUT see how 3SG.FUT hold /
 When we go, we will have a look and see how it turns out. (SAY_BC_conv_01_SP2_062)

17 Information structure

17.1 Assertion and Question

Let us consider assertion as a general category divided into assertion on the one hand, corresponding to factual statements (both affirmative and negative) and nonassertion on the other, corresponding to virtual statements (question, condition). Factual and Virtual statements all follow the same syntactic pattern, with no specific auxiliary or word order assigned to either. The difference appears at the end of the utterance, either through intonation (rising contour for Y/N questions and exclamation, falling contour for assertion and WH-questions) or through negative and assertive particles appearing there.

17.1.1 Negation

The original *Zaar* negation is expressed through the particle *hán* (NEG2) added to the end of the utterance, though before sentence-final adverbs.

²⁸ Cf. § 8.7.4.

Ex 74. **tô: m̄ jis̄n̄ ḡàtn h̄n ɗan //**
 well 1SG.AOR know 1SG.POS NEG2 again //
 Well, I don't know. (SAY_BC_narr_01_SP1_647)

Hausa negative particles have found their way into *Zaar*: **bà:** (NEG1) for all utterances and **kát** (NEG3 < Hausa *káɗá*) for negative injunction.

Ex 75. **kát m̄ na: m̄n ɗamtsá h̄n //**
 neg3 1pl.sbjv become people selfishness neg2 //
 Let's not get selfish. (SAY_BC_Narr_02_Sp1_472)

17.1.2 Assertive particles

The three assertive particles **-o:** / **-a:** / and **-e:** are optionally cliticized at the end of an utterance to emphasize certain types of assertion:

-o: (Factual, glossed FCT) is added at the end of factual statements (positive or negative assertions)

Ex 76. **á wul tu m̄j̄:ni /**
 3SG.AOR say COMP 1SG /
bà: má: jel ḡàtn nḡàtn wón h̄n -o: //
 NEG1 1SG.PFV see 3SG.POS thing some NEG2 -FCT //
 She said, as for me, I didn't see my own. (SAY_BC_narr_01_SP1_661)

-a: (Virtual, glossed VRT) is added to Y/N questions and the apodoses of conditionals:

Ex 77. **á b̄n-í: -a: //**
 3SG.AOR finish-RES -VRT //
 Is it finished? (SAY_BC_Conv_02_SP1_150)

Ex 78. **m̄ kap ngas -a: / àfó: //**
 1SG.SBJV take angas -VRT / Afo //
 Shouldn't we marry Angas people, Afo? (SAY_BC_conv_01_SP2_133)

-e: (Question, glossed Q) is added to WH-Questions.

The *Zaar* question words are: **ní:** 'what?'; **nú:** 'who?'; **ḡjò:** 'which one?'; **wuri:** 'how?'; **dzàngjò:** 'when?' (lit. 'which day?'); **ɗò:** 'where?'; **n̄ n̄:** 'why?'

Ex 79. **tá ní: tu=k̄ á ɗàt̄pm -e: //**
 then what meet=2SG.OBJ at way -Q //
 Then, what happened to you on the road? (SAY_BC_Conv03_SP2_209)

Ex 80. **n̄ ní: / á zupm =m̄ m̄n / á gamk̄n -í: -e: //**
 COPI what / 3SG.AOR squat =1SG.OBJ BEN / at forehead -RES -Q //
 What is it that landed on my forehead here? (SAY_BC_Narr_02_Sp1_173)

Ex 81. **ɗanganí -án / tá fi wuri: / tá ɗi t̄u: -án -e: //**
 now -PROX / 3PL.FUT do how / 3PL.FUT eat meat -PROX -Q //
 Now, how will they eat that meat? (SAY_BC_Narr_02_Sp1_338-40)

17.2 Topicalization

As can be expected of oral corpora, topicalization is very common in our *Zaar* data.

The universal order "Topic – Comment" prevails, with topics often ending in topicalizing particles borrowed from Hausa: **má:** 'too'; **kúmá** 'as well'; **fá:** 'indeed', etc.

Ex 82.

nàmbón=wòpm	kúmá
one = 1PL.POS	too

à: **mǎfí:** **da** **dú:ni** /
3SG.PFV die-DEF at here /
And one of us died here. (SAY_BC_Narr_02_Sp1_342)

Adverbials can be left-dislocated, as part of the preamble of the utterance, e.g. **kó:dzàngjó:** ‘every day, any day’ in (80), with **kúmá** as a TOP particle:

Ex 83.

ká	jisán	la:=ká	sàjá:sa	kúmá	/
2PL.SBJ.AOR	know	work = POS	politics	too	/

kó:dzàngjó:	ǫfiká	dàtâpm	//
every day	3PL.SBJ.CONT	way	//

You know the work of politics too, every day they are on the road. (SAY_BC_Conv03_SP2_139)

17.3 Focus

Unlike Hausa, there is no partition of the TAM system into +/- focus-compatible paradigms. The focussed element is identified by **nə** (COP1) or **kən** (COP2), and is extraposed sentence-initially.

Ex 84.

nə	mjà:ní	dan
COP1	1PL	REL2

à: **kon** **sâm=wòpm-í-o:**
3SG.PFV say name = 1PL.POS-DEF-FCT
We are the ones whose name he called. (SAY_BC_Conv_02_SP2_223)

18 Intonation

The role of pitch in *Zaar* intonation can be observed in the variation between lexical and grammatical tones as they are perceived and transcribed by the native speaker and their acoustic realization. These variations, i.e. the way intonation influences the realization of post-lexical tones, fall under the following categories:

- (a) Declination;
- (b) Intonemes, which are divided into:
 - Initial intonemes: Downstep (!) and Upstep (j).
 - Final intonemes: Falling (↓), Rising (↑), Continuing (→) and High-Falling (↑↓);

18.1 Declination

Declination has not been phonologized into downstep in *Zaar*, and can still be observed in all units, from minor to full period, as a gradual lowering of the pitch over the intonation unit (IU). This is particularly noticeable with regard to High tones. The relative height of tones within an IU is linked to stress. Emphatic stress in *Zaar* is used to underline the rhematic status of lexemes. Stress overrides declination and restores to a tone its full lexical value. The highest tone in an IU is the first High tone of the first rhematic lexeme. If this rhematic lexeme does not bear a high tone, or if the IU has no rhematic lexeme, the highest tone is the first High tone of the unit. Within this framework, each High tone following the nuclear stress of an intonation unit is pronounced lower than the preceding one. This yields the canonical declarative intonation of *Zaar*. The same intonation pattern is found in WH-Questions, as in the following example.

cases of plateau realization of a flat tone. Seen only at the end of minor units, it is often associated with topicalizing morphemes. Such an intoneme can be seen in (83) at the end of the second IU. The Rising-Falling intoneme (noted $\uparrow\downarrow$) appears as a sharp downward fall preceded by a smaller rise. It is systematically associated with emphasis on negation, ideophones and assertion particles. In (84), it falls on the final negation followed by the assertive particle $-\sigma$.

Ex 87.

Generally speaking, the role of pitch variation in *Zaar*, despite the constraints of tone assignment, follows the same rules as in languages like English: “the fall of voice suggests matter-of-factness, or, as Halliday (1970:23) suggests ‘certainty with regard to yes or no’. If the voice starts exceptionally high, this is interpretable as emphasis of the self-assertive attitude. By contrast, the rising pitch essentially suggests some kind of appeal by the interlocutor.” (Markus 2006:117)
