

Publishing and sharing historical data on the semantic web : the SyMoGIH project – symogih.org

Francesco Beretta, Djamel Ferhod, Séverine Gedzelman, Pierre Vernus

Pôle histoire numérique – Laboratoire de recherche historique Rhône-Alpes (CNRS – Université de Lyon)

Resources interlinking

- provide a stable URI:
<http://symogih.org/resource/Actr195>
- provide a human-readable resource description
- dereference over the HTTP protocol into a RDF representation
- interlink resources :
<http://symogih.org/resource/Actr195>
owl:sameAs <http://www.idref.fr/026947676/id> ;
owl:sameAs <http://d-nb.info/gnd/118561448> .

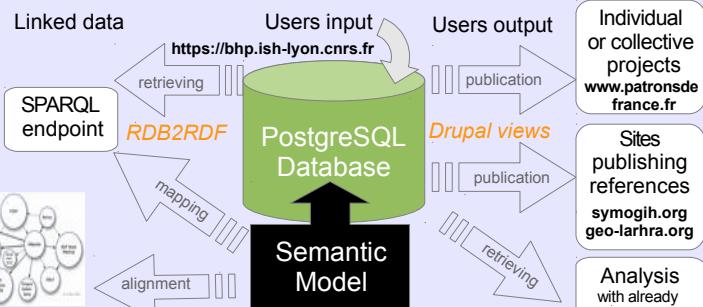

Data integration

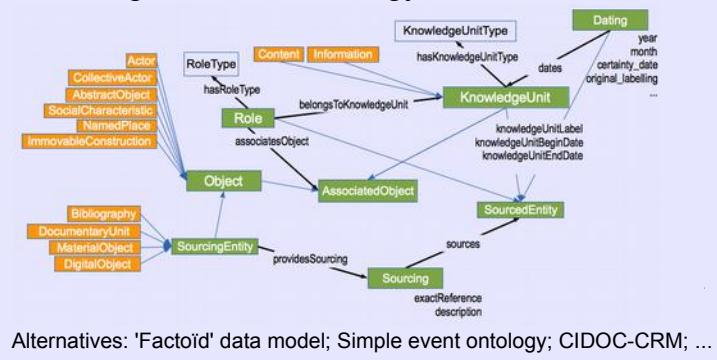

- evaluate data freshness, quality, sourcing
- automate resources alignment
- align ontologies
- solve performance issues in federated queries
- import data dumps
- produce and store knew geo-historical knowledge

The screenshot displays a biography for Johannes Kepler, born in 1571 and died in 1630. It includes sections for Références (References), Objets (Objects), and Biographie – documentation (Biography – documentation). A green box highlights the URI <http://symogih.org/resource/Actr195>.

Open, modular, collaborative platform for storing, analyzing and publishing historical data and texts

Providing a suitable ontology

Alternatives: 'Factoïd' data model; Simple event ontology; CIDOC-CRM; ...

Sharing knowledge over the web of data

- define data publishing rules and licence
 - Etabl Open licence
 - ODC Open Database License (ODbL)
 - ...
- rewrite the data according to RDB2RDF principles and to the adopted ontology
- create a SPARQL-endpoint using D2RQ
- periodically dump the data and put them in a OpenLink Virtuoso triple store to improve queries performance
