INTRODUCTION

This introduction is divided into five sections. It opens with a presentation of the language (§1), then zooms in on the dialect studied and the participants in the documentation work (§2). The objectives and chronology of the fieldwork and lexicographical work are then outlined (§3). The following section, §4, constitutes a User’s Guide. Finally, some research perspectives are outlined (§5), with the aim of bringing out some of the broader topics that are at stake in lexicographical work on endangered languages.

1 The Na and the Yongning Na language

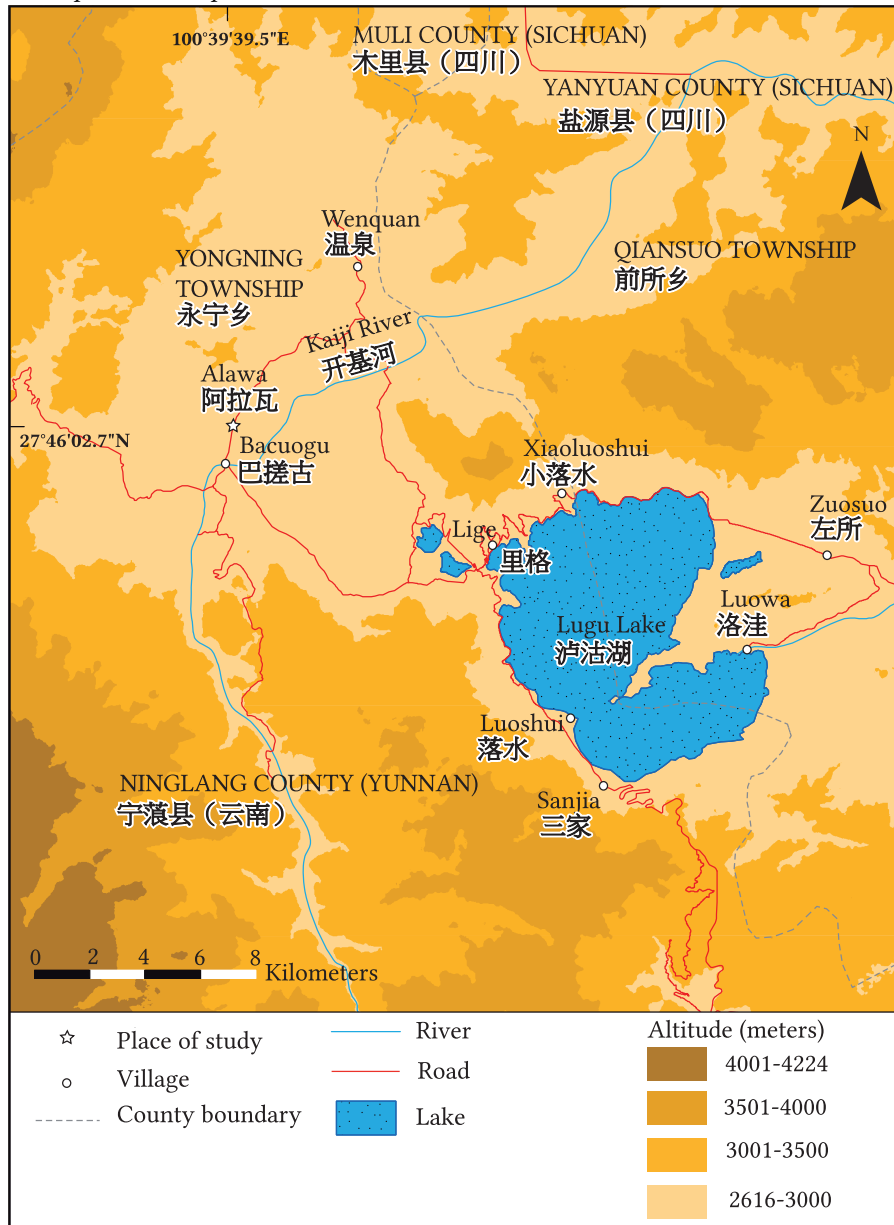

The Na (Mosuo) are famous, both among anthropologists and among the general public, for their distinctive family structures. Cai Hua depicts them as *A Society Without Fathers or Husbands* (CAI 1997), but one of his readers (WELLENS 2003, p. 147) points out that, in his desire to depict Na society as diametrically opposed to Chinese (Han) society, the author discreetly disregards observations that do not align with the sweeping generalization expressed in the title of his book. A far more adequate description portrays the Na as an exemplary case of a society that is both matrilineal and matrilocal. Such a characterization has been present in Chinese ethnological studies since the early works of the 1980s (SHIH 1993, 2010, WENG 1993, YÁN RǔXIÁN & SÒNG ZHÀOLÍN 1983, ZHĀN CHÉNGXÙ *et al.* 1980); however, these studies focus on theories of descent while describing a diversity of practices that strongly contrast with the rigid interpretation given to them.

Detailed ethnography of Na villages (MILAN 2016, 2019) invites us to a shift in perspective whereby Na family structures are interpreted within the specific context of the Sino-Tibetan borderlands, an area where remarkable diversity in kinship systems is found. Rather than focusing on a classification based on notions such as ‘matrilineality’, it is enlightening to approach these diverse family structures in terms of the dynamics of the *houses*. This perspective, stemming from early critiques of the lineage paradigm, deserves to be integrated as a central element in any analysis of Na family structures (HO 2006, ZHOU 2003). It brings out a coherence among practices which models of descent struggled to capture: the various forms of cohabitation and marriage can be understood as *strategies aimed at ensuring the social reproduction of houses*. Thus, “taking a wife” (*chumi shei*) is a way for a house to ensure its balance and continuity.¹ These practices allow houses to adapt to the various political regimes that have succeeded one another, dating back to historical periods well before the communist takeover in 1958. In this perspective, the study of how Na families adapt to the social changes brought about by the rapid development of tourism in the Lugu Lake region in recent years (MATTISON 2010, MILAN 2019, WALSH 2001) is a coherent extension of a body of anthropological research that has, decade after decade, profoundly renewed approaches to the anthropology of kinship and family.

In comparison to the amount of ethnographic and anthropological work carried out in the Na area, much less attention was directed to linguistic topics. The Na (Mosuo) language had scarcely been the subject of in-depth research until the early 21st century. Yet this language exhibits fascinating properties, including a very rich morphotonology, where tones play a role across the entire grammatical system (MICHAUD 2017). The present dictionary is part of a broader endeavour to produce substantial,

reliable documentation on the Yongning Na language.

The language's endonym (autonym) is /naɭ-zwɿʔ/, an autonym romanized as 'Narua' (DOBBS & XIÓNG 2018). It is known in China as 'Mosuo' 摩梭话, and classified as an 'Eastern dialect' of the Naxi language (HÉ JÍRÉN & JIĀNG ZHÚYÍ 1985, p. 107). The language's Ethnologue code is NRU (LEWIS *et al.* 2016) and its Glottolog code is YONGI270 (NORDHOFF 2012). The name 'Yongning Na' was coined by Liberty LIDZ (2006) by associating the people's endonym with the name of the place where the language is spoken: the plain of Yongning 永宁, a basin located in Southwestern China, at the border between Yunnan and Sichuan, at a latitude of 27°50' N and a longitude of 100°41' (see map 1). Yongning is close to Lugu Lake 泸沽湖 (in Na: /loɭɿj-hi.naɿmiɿ/), a lake of about fifty square kilometres which creates a microclimate that is suitable for farming despite the high altitude (about 2,800 meters above sea level).

The total number of speakers was estimated at about 40,000 on the basis of survey data from the late 1950s (HÉ JÍRÉN & JIĀNG ZHÚYÍ 1985, p. 107); the same figure is taken up by (YANG 2009). The number of proficient speakers in the 2020s is much lower: language replacement (by Mandarin) is under way.

Since the 1990s, and especially in the 21st century, the Yongning region has become a major tourist destination. An

anthropological study of the impacts of this new industry (MILAN 2019) echoes the intuition of a contemporary poet:

Tourism has spread like floodwaters carrying wrecks. It dislocates even the most remote villages, and trumpets its empty, arrogant formulas in the most secret chambers of temples: stereotypes that are, alas, typical of our Western culture. Advertising brochures are nobody's speech; they tend to force the inhabitants of the places visited to see themselves from the outside, to tell their own stories in the way that lazy visitors wish them to, and to replace their own intuitions and memories by gaudy pictures to cater for the taste of visitors. (Yves Bonnefoy, *L'Inachevable. Entretiens sur la poésie*, 1990-2010. Paris: Albin Michel, 2014, p. 232.)

This context lends extra significance to the task of paying attention to the language of the Na, at a time when it is being rapidly replaced by Mandarin Chinese (the language of schooling, of the media, and of tourism). I have a hope that the recordings made in the field, and gradually transcribed, translated and annotated, will succeed in preserving and transmitting, in all its freshness, the speech of this volume's co-author, which she has agreed to make public for the sake of research and of posterity. The dictionary is intended as a tool for accessing these documents, which document a disappearing language and culture that have value, not only in the abstract sense of being possible and attested forms of human language and society (to be taken into account in typological models and in historical accounts), but in and of themselves.

The world, to us, (...) is it not first and foremost fields which have been cleared and ploughed by people who were thereby founding, grounding, their presence in a specific place? If it be thus, words would be a way to inscribe and express a sense of presence projected onto a rough 'out there' (...). Or let's put it this way: What if words were not means to handle general, abstract notions, but windows onto the relationship established between a human presence and a place? Then words would not serve as a "lexicon" of what we call *nature*: they would constitute doors opening onto a land (a 'sojourn', as Mallarmé put it) where we can be at home, where familiar names create bounding horizons. If it be so, each and every encounter would be a chunk of our destiny, not an abstract event feeding into some scientific generalizations. Our awakened consciousness should hold onto it as something open and possible (even though the swift course of time robs us of so many of such possibilities). We should not erase living encounters from our speech, dismissing them as mere examples of some abstract, timeless scheme. (Yves Bonnefoy, «La fleur double, la sente étroite: la nuée», reprinted in *La Vérité de parole et autres essais*, Paris: Gallimard, 1995, pp. 566-567).

Bibliographical indications

Important references on Na include a reference grammar of a dialect close to the one described here: that of Luoshui 落水 (LIDZ 2010), as well as research into the tone systems of previously undocumented dialects (Ā HUÌ 2016, DOBBS & LA 2016, FILY 2022). Concerning lexicographic work, *An anthology of everyday words and expressions in the Mosuo language* (ZHÍBĀ ĚRCHĒ & Xǔ RUÌJUĀN 2013) presents vocabulary and expressions arranged by semantic field. The authors are a native speaker from the Lake area (泸沽湖) and a doctor in linguistics from Yunnan University. Their fieldwork is described as covering the Yongning plain and the Lake area, but with the Yongning plain as the main research area (p. 2). Approximations in phonetic notation are so numerous that they make the volume unreliable as a work of reference. Voicing contrasts were challenging for the linguist in the team, whose training was mainly focused on the theory and practice of teaching Chinese as a foreign language. Thus, the name of the mountain /kɣɿmɿ/ is transcribed as [gə⁵⁵mu⁵⁵], with a voiced initial (p. 17 and elsewhere). The mountain's name in Chinese, 格姆山, *Gemu* in romanized Chinese, may have exerted an influence here. Conversely, the adjective /dzɿ/ 'good' is transcribed as [tɕa¹³], with an unvoiced initial. Some phonemes, such as uvulars, are absent from the notations. There is thus clearly a gap to be filled in lexicographic work on Na. Dictionaries on neighbouring Naxi provide a brilliant example to be emulated (HÉ JÍRÉN & ZHÀO QÌNGLIÁN, *et al.* 2011, PINSON 2012).

2 Dialect and language consultants

2.1 Language consultants

Unless otherwise stated, all the data are from the second author, Mrs. Latami Daeshi Lhamu (/la^hta^hmi^h tʃæ^hʃu^h-tʃa^hlmy^h/; Chinese: 拉他咪打史拉姆 Lātāmǐ Dǎshīlāmǔ). She was born in 1950 in the hamlet called Alawua /ə^hla^h-ɛwɤ^hʃ^h/, close to the monastery of Yongning. The administrative coordinates of this hamlet are: Yúnnán province, Lǐjiāng municipality, Nínglǎng Yí autonomous county, Yǒngníng town, Ālāwǎ village (云南省丽江市宁蒗彝族自治县永宁镇²阿拉瓦村). This language variety corresponds to the Glottolog code YONG1288, as distinct from the Lataddi variety (Lataddi Narua), spoken on the shore of Lugu Lake (code: LATA1234).

The choice to work in one location only, and essentially with one consultant, is based on the investigator's initial focus on the tone system. There is considerable dialectal diversity within the Na area (much more so than in the Naxi-speaking area); the tone systems of different villages are conspicuously different, and this geographical diversity combines with dramatic differences across social groups, and across generations. The obvious thing to do seemed to be an in-depth description and analysis of the language as spoken by one person (simultaneously making a few forays into other idiolects and dialects). The collaboration went well, so much so that Mrs. Latami accepted (in 2024) the proposal to have her name appear as coauthor of the present volume.

Data from other speakers are indicated in the dictionary using two-letter initials, provided in the leftmost column in Table 1. The table indicates the correspondence with the speaker codes in A. Michaud's database (such as 'F4' for the main consultant and coauthor of this volume). The numbering of Na consultants in terms of these speaker codes is discontinuous (F4, F5, F6, F22 and M18, M21, M23 instead of F1 through F4 and M1 through M3) because they were assigned as part of a list of consultants for all three languages of the Naish group: Naxi, Na and Laze.

Table 1: Language consultants

The small circle of consultants has grown organically over time. The first contact was Latami Daeshi (M18), who kindly undertook to look for language consultants in the village. As explained elsewhere (MICHAUD 2017, pp. 28–29), this search did not prove fruitful at first, and it was his mother (F4) who agreed to take on the role of consultant-teacher. She remains a constant point of reference, the main source for the linguist's work and a daily dialogue partner in the field. Her daughter-in-law (F5) agreed to lend a hand, as did one of the latter's nieces (F6). Later, one of F4's cousins (M21) and his son (M23) also took part in the survey. Finally, Siggeema (F22) is from the village of Wu^halabbi; she participates in the project through orthography testing and correction work with Roselle Dobbs, and by providing insider information on various topics of Na phonetics,

semantics, grammar and dialectology.

The small sample that has thus been built up over time, without any fixed overall plan, is not balanced according to any particular criterion, and no claim is made that it is representative in any sense. Nevertheless, some of its characteristics can be noted in retrospect.

In terms of generations, the sample shows a certain diversity. The speakers do not all belong to the same house, and belong to three successive generations. F4, co-author of the volume, was born in 1950 and is of the same generation as M21. The next generation is represented by M18 (her son), F5 (her daughter-in-law) and M23 (M21's son). F6 and F22 are younger, so much so that they can be considered as belonging to a third generation.

In terms of relationship to the language and culture:

- F4 is the most immersed in Na culture, having resided continuously in Yongning for sixty years (from birth until 2010).
- F5 and M23 belong to the next generation of speakers who remained in the village (where they still lived as of 2024), for whom local Chinese (Southwestern Mandarin) is a language spoken fluently from a young age, close to a *second mother tongue*.
- M18 has a lifelong commitment to research on the Na culture, to which he has deep attachment. He uses the language on a day-to-day basis with his mother (F4). He expresses himself fluently in Na³. However, the title of *心碎与忧伤* (*Grief and sorrow*) that he gave to a collection of his papers (LĀTĀMĪ 2016) speaks volumes about the tensions inherent in living one's life as a reader, researcher and writer in a language which is not that of one's "mother culture".
- M21 has lived in various places in the region, and the dialectal adjustments made in the course of his life naturally led to a certain distance between his speech and that of speakers with a less diverse experience. We are particularly grateful for his efforts to take part in the work despite his partial deafness.

Today, as in the past, a constant goal and hope is to involve speakers as closely as possible in research into their language. The decision to have this book co-authored by the main consultant is in keeping with this logic. Her son Latami Wangyong did not wait for the exchanges with Alexis Michaud to enter the circle of scholars. As an ethnologist specializing in Na culture, his contribution to this book is grounded in his scholarly perspective, rather than in his status as a native speaker.

2.2 Other collaborators

Other collaborators include:

- Pascale-Marie Milan, who brings her expert ethnological-anthropological perspective to the work. From version 2 onwards, her seminal contribution is recognized by the status of co-author.
- Roselle Dobbs (Ddeema Lhaco, 杜玫瑰) and her Na friends and collaborators, to whom I owe, in addition to the spelling with which Roselle has endowed this dictionary, a flow of information, corrections and advice since the beginning of my research into Yongning Na.
- Benjamin Galliot, who has been editing the dictionary since 2016 to the highest computational and typographic standards, with an exceptional degree of attention to detail as well as to overall structure.

The term *consultant* could also be used for these collaborators, insofar as they provide expert advice, corrections and observations of all kinds as the work progresses. This usage is certainly too paradoxical in the light of current practices (where the term is used for *language consultants*, referred to in the past as *informants*) for us to be tempted to adopt it; however, it would have the advantage of not creating a boundary between two groups: native speakers and others, but on the contrary of emphasizing that the dictionary is the fruit of team work.

3. Eight recordings (audio and video) that he has made on the following themes can be consulted online: 1: *Yongning and the Na*; 2: the ethnonym 'Mosuo': its history and relevance; 3: personal narrative; 4 and 5: a look back at the collaboration with the linguist-investigator; 6: a review of Mosuo (Na) studies; 7: the cultural values inherited by young people; 8: the symbolic importance of the hearth in Mosuo (Na) culture.

2.3 The Alawua speech variety and its dialectal context

The contours of the *communities* within which the Na dialects are spoken are not necessarily as clearly delineated as in Native American or Aboriginal Australian societies, which constitute an important reference in most contemporary English-language methodological work.⁴ Na speakers' sense of belonging is an area that is not only complex (as is natural in human societies) but also politically sensitive, in the context of a contemporary China whose resolutely assimilationist plans aim to melt the former "minority nationalities" (少数民族) into the melting-pot of the "Chinese people" (中华民族). No attempt will be made here to define the geographical boundaries of a "Alawua dialect of Na" that would extend beyond this hamlet to cover such and such an area on a dialect map. The label "speech variety spoken in Alawua" is considered as a sufficient language tag for the corpus collected in this one location: no attempt is made to place this speech variety within a comprehensive list of all Na dialects.

It could be argued, however, that the mere fact of endowing this speech variety with a dictionary gives it a prominent place in a contemporary lexicographical landscape that is still very sparse. Seen in this light, the orthographic representation provided in the dictionary has special value, as it aims to achieve a certain balance between dialects: it is not based on one dialect only (or have one specific speaker as an authoritative reference).

3 Aims and chronology of the project

Adams, our head-boy, who had a turn for mathematics, had made a calculation, I was informed, of the time this Dictionary [a new Dictionary which Dr. Strong, the headmaster, had in contemplation] would take in completing, on the Doctor's plan, and at the Doctor's rate of going. He considered that it might be done in one thousand six hundred and forty-nine years, counting from the Doctor's last, or sixty-second, birthday. (Charles Dickens, *David Copperfield* (1850), Chapter 16.)

Since the project is constrained by limited resources of money, staff and time, the project must be organized in such a way that even after a very short period the dictionary makers can produce a useful piece of work. ("Dictionary making in endangered speech communities": MOSEL 2004, p. 42)

3.1 Elicitation method

In the classical tradition of linguistic fieldwork, a language description should include a dictionary, a grammar, and a collection of texts. Linguistic fieldwork consists in "going into a community where a language is spoken, collecting data from fluent native speakers, analysing the data, and providing a comprehensive description, consisting of grammar, texts and dictionary" (DIXON 2007, p. 12). The grammar, texts and dictionary are referred to as the "Boasian trilogy" (FOLEY 1999) by reference to Franz Boas's foundational work collecting North American languages (BOAS 1902, BOAS & SWANTON 1911). Thus, the lexicographic data presented in this volume were collected as part of all-out fieldwork on Yongning Na. Trips to the field were made in 2006, 2007, 2008 and 2009, followed in 2011-2012 by a one-year stay in the city of Lijiang, where Mrs. Latami Daeshi Lhamu had settled to take care of a grandchild. Shorter stays were made in 2013, 2014, 2018 and 2024.

4. Thus, the term 'community' appears no less than thirty-one times in an article about immersion language fieldwork methods written by a colleague affiliated with the University of Sydney: "Enhancing data collection through linguistic competence in a field language: Perspectives from rural China". Manuel David González Pérez's article is based on in-depth reflections on fieldwork carried out on a Yi language from Yunnan; close to 200 references are cited, reporting experiences that concern a wide variety of languages, but all are English-language references (with the exception of two in German and two in Spanish), which entails a slight risk of cultural bias. This cultural bias could have consequences comparable to the linguistic bias whereby too few languages are taken into consideration when formulating linguistic generalizations (it has been pointed out that "language research shows a lack of openness to diverse languages and populations": BOCHYNSKA *et al.* 2023, p. 23). González Pérez does not mention local (Chinese or Yi) equivalents for the term 'community', or specificities in the understanding of group dynamics as they relate to language use: no mention is made of language policies or the political context of present-day China – which may seem paradoxical given the observation of other foreign visitors that politics is by no means absent from people's preoccupations in the Middle Kingdom (among many examples, see Henri Michaux, *Un barbare en Asie*, Paris: Gallimard, 1967, pages 178sq). It goes without saying that this remark does not constitute a criticism aimed at the author, who could not possibly go into all and every issue related to the vast topic broached in the article cited. The idea is simply to point out the ever-present risk of being wrapped up in one's own views, forgetting that the socio-geo-political diversity of situations is virtually infinite, and putting forward unwarranted generalizations about situations in the field.

A list of words was begun through elicitation, and gradually expanded and corrected as narratives were recorded and transcribed. A drawback of not eliciting large amounts of vocabulary is that addition of new words is a slow process. Hence the limited number of entries: on the order of 3,000 (the current count stands at 3291). On the other hand, an advantage of placing the emphasis on text collection is that a context is available to help clarify the meaning of newly encountered words, also offering a basis for further discussion of their usage with language consultants.

The native speaker interviewees might feel very embarrassed when they are asked to translate a word they do not understand, or even worse, a word which they cannot translate because they have forgotten the native language equivalent.

Words which have been elicited by translation always need to be counterchecked by translating them later back into English or by explaining their meaning. The meaning of the indigenous word may be broader or narrower than its English counterpart, and the words in either language may be polysemous in different ways so that their meanings only partly overlap. (MOSEL 2004, p. 44)

The word list as of 2011 was deposited in the Sino-Tibetan Etymological Dictionary and Thesaurus (STEDT) database (COOK & LOWE 2000), at the request of the curators. The same year, under the impetus of Guillaume Jacques and Aimée Lahaussais, plans were made to bring the word list closer to the standards of a full-fledged dictionary. A project was deposited with the *Agence Nationale de la Recherche*, accepted in 2012, and begun in 2013: the HimalCo project (ANR-12-CORP-0006).

Dictionaries constitute work-in-progress. Successive versions are numbered, following the model used in software development. The versions produced so far are presented below in chronological order. A summary in table form is provided in Table 2 for English-language editions. Chinese-language editions are shown in Table 3, and French-language editions in Table 4.

3.2 Versions 1.0 and 1.1: adhering to the Lexical Markup Framework (LMF) standard

During a first stage of the project, the team adopted the Lexical Markup Framework (LMF) standard, a pivotal format designed for machine-readable dictionaries (FRANCOPOULO 2013, ROMARY 2013). Céline Buret, a computer science engineer who worked with the project team for two years (Nov. 2014–Oct. 2015), produced scripts for converting the lexicographic data from the format of the Field Linguist’s Toolbox (Multi-Dictionary Formatter, MDF) to an XML format complying with the LMF standard. A Python 2 library was developed: PyLMFlib, for *Python LMF library*. In 2015, version 1.0 of the online and PDF versions of the dictionary were released, along with the source database in MDF (Toolbox) format. Version 1.1, released in 2016, used the same library of computer scripts.

3.3 The Lexika software and the Lexica collection of dictionaries

A limitation of the Lexical Markup Framework in its 2013 formulation gradually became apparent: it places a constraint on what an entry can contain. Subentries that belong to different grammatical categories need to have separate entries set up. For instance, /laʔ-kʰyʔ/ can mean both ‘year of the Tiger’ and ‘born in the year of the Tiger’ (in Chinese: 虎年 and 属虎). From the linguist’s point of view, it is desirable to set up two subentries within the same entry. But the part-of-speech categories are different: ‘year of the Tiger’ is a noun phrase, and ‘born in the year of the Tiger’ is a predicate, categorized as an adjective. In the Lexical Markup Framework, this situation requires setting up two different entries, a requirement which is at variance with widespread lexicographic practice.

In 2016, Benjamin Galliot, working at CNRS-LACITO under a fixed-term (six-month) contract, wrote a new library, Lexika,⁵ using version 3 of the Python language, which allows for native management of the Unicode standard. At the time, Benjamin Galliot was instructed to stick to the *Lexical Markup Framework* (LMF) standard, although he had soon realized its limitations, and had expressed a wish to start again from scratch on a less constrained basis. One argument for not changing this choice was the short duration of Benjamin Galliot’s contract, which seemed incompatible with the ambitious overhaul which he wanted to design and implement.

In mid-2017, Benjamin Galliot, during a period when he did not have an employment contract, took the initiative to develop a complete overhaul of Lexika (GALLIOT 2017). This development was, for a time, referred to as “JLexika” because it was developed in the Julia language and not in Python. It was carried out as a personal challenge, one aspect of which consisted in gaining proficiency in a new programming language that he found appealing and which proved to be in tune with his turn of mind as a programmer. Some of the issues raised in the course of his work, and the solutions developed to address them, are set out in GALLIOT 2023.

At the end of the year 2017 (during a very short contract, lasting less than three months), in the light of exchanges with Laurent Romary and Mathieu Mangeot-Nagata, it was concluded that adherence to the LMF standard was definitely not bringing clear benefits, while it was necessitating the implementation of complex procedures in order to circumvent inherent limitations imposed by this standard. As Benjamin Galliot’s personal work on JLexika at the time was based on a standard-free format, PLexika’s XML model departed from the LMF standard in early 2018, focusing on the core objective of embracing the full diversity of languages (and linguists’ visions) in shaping each dictionary’s design. Customization is the cornerstone of both the collection and the software, allowing each dictionary to evolve with its own unique structure, design, and layout,

5. The name of the software, *Lexika*, differs (in its written form) from that chosen for the series of dictionaries of the Pangloss Collection: *Lexica* (BONNET *et al.* 2017). This is intended to prevent confusion between the software package, on the one hand, and the dictionary series.

fully adapted to the specific features of the language and the vision of its lexicographers. A constant concern throughout this work has been to maintain a high degree of internal coherence: in other words, to avoid any effect similar to a ‘Procrustean bed,’ where lexicographic practices would be forced, without any real internal necessity, to conform to externally imposed constraints.

Some years later, when Benjamin Galliot returned to the CNRS as a civil servant, he decided that it was more appropriate to continue developing JLexika, which was much more powerful and robust than PLexika. Lexika’s guiding principle, pushed to the extreme in its latest version, is to allow each dictionary to evolve with its own unique structure, design, and layout, fully adapted to the specific features of the language and the vision of its lexicographers. The format can be customized as required for each dictionary, while maintaining a common core for the dictionaries in the Lexica collection.⁶ The format remains compatible with the Text Encoding Initiative (TEI) standard via an XSL stylesheet. Among other features, it is possible to have the desired hierarchy (sub-entries and/or polysemy, various subdivisions, etc.), enriched text at all levels (various styles, links, mix of languages and scripts, etc.) as well as all the information deemed necessary (notes/comments, labels, encyclopaedic information, and explanations on etymology), attaching to various levels of the structure.

In the Lexika processing chain, PDF versions of the dictionary are generated from the XML file, itself generated from the source file, which remains in MDF format. New versions are generated as the lexicographic work progresses and made available via the GitHub repository that hosts the database.⁷

4 User guide

The Lexica series aims to combine (i) readability for users who browse through the dictionaries with (ii) computer-readable encoding suitable for Natural Language Processing purposes. Dictionaries are therefore offered in several formats:

- as PDF documents such as the present one
- as online dictionaries in HTML format
- as databases in Toolbox/MDF format (master file)
- as XML files produced through the Lexika software.

The database is available from the GitHub repository⁸ in two formats:

- an XML file using the model designed by Benjamin Galliot
- the master file in MDF format, which can be opened with the Toolbox software package

Three language settings are offered in Portable Document Format (PDF), addressing the needs of different linguistic communities: English-based (this version, [halshs-01204638](#)), Chinese-based ([halshs-01744420](#)), and French-based ([halshs-01204645](#)).

Chinese translations are often a useful complement to the translation in English, as there are often closer equivalents: for instance, /gʁʁ/ translates straightforwardly as Chinese 扛 whereas the English translation is more roundabout: ‘to carry on one’s shoulder’. French translations, on the other hand, could be dispensed with in the English PDF. They are nonetheless retained until the current version because they reflect most directly the first author’s understanding of the Na forms. At the current stage, English translations are still a little uneven despite efforts by the first author and corrections by Roselle Dobbs, so the presence of French (which is often not too hard for English speakers to decipher) can be of help in cases where the English is deficient.

The database structure will be presented first, then the typesetting choices.

The dictionary is made up of *lexical entries*. Each entry has a computer identifier. This identifier is not displayed in the PDF version of the dictionary, as its function is to enable computer manipulation, and not to be recognized by human eyes. This identifier is made up of the special character © followed by the phonological representation of the word (here, /hīl-t̚x#1/), with a tone notation system that uses special symbols (\$) and #) to distinguish the various kinds of high tones, depending on how they are associated with syllables. Full explanations of this system can be found in the monograph *Tone in Yongning Na*, available online in open access (MICHAUD 2017, pp. 80–90).

The *lemma* of the lexical entry comprises four pieces of information: its abstract phonological form, its tone, an orthographic representation (provided by Roselle Dobbs), and finally its surface form (which corresponds to its realization when the word is spoken in isolation).

The part of speech (morphosyntactic class) is then provided.

This is followed by a description of the meaning(s) of the word. An indication of the semantic domain is provided, from a closed list of terms (in French and English): ‘society’, ‘house’, ‘body’, ‘plant’, ‘animal’, and so on. This is a rough division, relying partly on form, and partly on semantic contents. No attempt was made to use a fine-grained classification of the sort found in the WordNet database of English, where nouns, verbs, adjectives and adverbs are grouped into sets of cognitive synonyms (FELLBAUM 2005).

Definitions are provided in English, Chinese and French. In a few cases, a definition in the vernacular language is provided. The process of producing explanations in the language under study is extremely useful (DINGEMANSE 2015), and the co-author of the dictionary is good at it; such definitions nonetheless remain very few to date because too little time was devoted to this task so far.

Glosses are also provided, with a view to future systematic glossing of texts.

The examples are also considered part of the ‘Meaning’ block, insofar as they illustrate one of the meanings of the word. Each example includes a transcription and a translation in the three target languages. Many examples are accompanied by notes, which include an attribute indicating the linguistic field concerned: semantics, syntax, morphology, phonology, tonology,⁹ or dialectology. This additional information appears in the PDF file (unless it carries a print=“n” label in the database).

Notes carrying a ‘history’ tag trace the history of notations from the earliest fieldwork to the current version. They provide explanations about the trial-and-error process, the date of adoption of a change in notation, and the arguments in its favour. For instance, the entry /ɲwɿɿp^hæʎ/ ‘tile’ has a note that indicates that it was initially written with a M.H tone pattern, and with a /æ/ vowel in both syllables: [ɲwæɿp^hæʎ]. The note explains that the perception of [æ] in the first syllable is due to a phonetic tendency towards regressive vowel harmony. Verifications are also consigned in this field. About half the entries have information of this type. This sometimes roundabout history did not seem relevant to most readers, so it does not appear in the PDFs.

Semantic relationships such as synonymy are encoded, as is etymology. In the current state of the dictionary, the information somewhat misleadingly labelled as “etymological” essentially consists of synchronic links between a disyllabic or polysyllabic word and the morphemes of which it is (uncontroversially) composed: for example to point out that /æɿsæɿpiɿmɿʎ/ ‘tale’ is formed from the two words /æɿsæɿ#/ ‘formerly’ and /piɿmɿʎ\$/ ‘saying, adage’.

4.2 Structure of dictionary entries in the PDF document

In the typeset version, each entry begins with the headword in phonological transcription – here, /aɿp^hɿ#/. As explained above, tone is indicated in terms of phonological categories as analyzed in the monograph *Tone in Yongning Na*, available online in open access (MICHAUD 2017, pp. 80–90). The International Phonetic Alphabet is supplemented by the special symbols \$ and #, which are used to distinguish among the various types of High tones, based on their mode of association with syllables.

A surface form is provided to its right, between slanting lines (slashes). It is the surface-phonological form of the word in phonetic alphabet, commonly referred to as the “citation form”. Tone is indicated in terms of surface tonal realizations. This form (here: [aɿp^hɿ]) can be read by anyone with a knowledge of the International Phonetic Alphabet, without requiring an understanding of the mapping of underlying phonological tone categories to surface tone in Yongning Na.

For surface-phonological forms, the aim was to achieve greatest simplicity. Special symbols used in the word’s underlying phonological form are removed from the surface form: dashes indicating junctures internal to the word, tilde in reduplicated forms, and the special symbols \$ and # (used to distinguish among the various types of High tones). For classifiers, the numeral ‘one’ is added before the classifier, because classifiers are not free forms: they cannot be said on their own. For other bound morphemes, such as affixes and clitics, no surface form is indicated.

An orthographic representation is also provided: a notation in a Romanized script devised by Roselle Dobbs and Xióng Yàn (DOBBS & XIÓNG 2018) – here, *opu*. Orthography was added by Roselle Dobbs, starting in 2017. The transcription was developed with a view to use within the Na community. Importantly, this is not a transliteration of the phonological representation provided in International Phonetic Alphabet. Phonological forms are all based on the dialect of the second author, whereas proposed orthographic representations are intended by Roselle Dobbs, Xiong Yan and their collaborators as a cross-dialect writing system. Given the high degree of dialectal diversity, proposing a transcription that is acceptable for speakers of several dialects implies some compromises. For instance, only the low tone (L) is indicated (with the letter *q* at the end of monosyllabic words), because it was found to be more stable than the other tones across the dialects taken into account when devising the orthography.

Idiolectal similarities and differences in pronunciation are then indicated, by associating the speaker code with the label ‘same’ (if the consultant’s pronunciation is identical to that of the co-author of the dictionary, who is the reference speaker) or with an International Phonetic Alphabet transcription of their pronunciation.

The part of speech is indicated using a simple set of labels shown in Table 5.

9. (Tonology is coded differently from phonology because of the important role it plays in the documentation and research work carried out)

Table 5: Parts of speech

The tone category of the word is provided to the right of the part-of-speech label. The tonal class indicated is the underlying phonological category of the word. This information is already present in the phonological transcription, but having it repeated on its own facilitates searches.

The English and Chinese translations follow. The lexicographical database also includes a French translation, but the presence of English and French side by side, even when distinguished by typography (through the use of different colours), made reading less smooth, which led to the exclusion of French from this version of the dictionary. On the other hand, Chinese translations are often a useful complement to the English translation, as there are often closer equivalents. For example, /gʏʌ/ translates into the simple 扛 in Chinese, whereas the English translation is less straightforward: ‘to carry on one’s shoulder’.

Examples (expressions and sentences illustrating the use of the word) begin with a ¶ mark. They fall into three main categories: (i) “dictionary examples”, collected in fieldwork and published specifically as part of the dictionary; (ii) examples excerpted from the set of Na texts (transcribed audio recordings) in the Pangloss Collection, an open-access online archive (about which see MICHAĬLOVSKY *et al.* 2014); and (iii) simple pointers (hyperlinks) to examples in the online archive that appear especially illuminating for the study of the word at issue. Among examples in set (i), those elicited to study the tones of specific word combinations are preceded by the mention “(Phonological elicitation)”. Proverbs and sayings are marked as “(Proverb)”. The source of the examples is indicated, except in the case of information provided by the reference speaker.

Finally, there are links to related words, such as synonyms, or constituent parts of complex words. For nouns, the most commonly used classifiers are indicated (here, /mi/).

Archaic words are singled out as such through the mention “Archaic”.

The dictionary adopts the abbreviations recommended in the Leipzig Glossing Rules (COMRIE *et al.* 2008); all other terms are provided in full. Glosses mostly follow the choices made by LIDZ (2010).

Some monosyllabic roots extracted from disyllables are indicated by the symbol †. No surface form is provided, as these monosyllabic forms are not currently in use in the language.

Borrowings from Chinese and Tibetan are indicated as such in cases where identification seems straightforward. No efforts at systematic elicitation of borrowings from either language were made, but all loanwords occurring in texts were added to the dictionary. The information provided includes: the donor language, the form in the donor language, and occasionally an explanatory note.

4.3 Links to online texts

As mentioned in §4.2, some of the examples are excerpted from the set of Na texts (transcribed audio recordings) in the Pangloss Collection, an open-access online archive (about which see MICHAÏLOVSKY *et al.* 2014). A one-click link from the PDF to the exact location of the example in the online archive is offered, by means of the document's Digital Object Identifier (DOI). Simple pointers (a reference and a hyperlink) are also provided for some examples in the online archive that appear especially illuminating for the study of the word at issue, but which it did not seem highly relevant to reproduce in full in the dictionary.

A prospect for future improvement beyond these hand-picked links consists in creating *systematic*, dynamic links between resources, so that dictionaries, primary documentation (the texts that constitute the core of linguistic resources) and grammars can become more and more interconnected (MAXWELL 2012). Textual occurrences ultimately constitute the best resource to document a word's usage. The examples currently presented in the dictionary are few in number, compared to the occurrences in texts, and their context of use may not be clear, despite efforts at providing contextual information for examples jotted down during fieldwork. No time line can be offered as yet concerning the production of complete concordances of occurrences in texts. This development will require glossing the texts at the level of the word and deploying identifiers (such as those used in the lexical database) allowing for error-free mapping from words in texts to dictionary entries.

5 Lexicology as a research programme

Lexicography has been considered as somewhat peripheral among the language sciences: its task would consist in carrying out a simple inventory. Thus Samuel Johnson, in the Preface to his 1755 *Dictionary of the English Language*, bemoans that

It is the fate of those who toil at the lower employments of life, to be rather driven by the fear of evil, than attracted by the prospect of good; to be exposed to censure, without hope of praise; to be disgraced by miscarriage, or punished for neglect, where success would have been without applause, and diligence without reward.

Among these unhappy mortals is the writer of dictionaries; whom mankind have considered, not as the pupil, but the slave of science (...). Every other authour (*sic.*) may aspire to praise; the lexicographer can only hope to escape reproach, and even this negative recompence (*sic.*) has been yet granted to very few.

Two and a half centuries later, a professor of linguistics in England provided a pithy summary of the same observation: “the lexicographer is the equivalent in linguistics to the guy stacking the shelves at Sainsbury's” (anonymized personal communication, 1996). In contrast to the description of the morphosyntax of a language, which aims to highlight the cogency of the grammatical system as a whole, the description of the lexicon tends to be seen as piecemeal in nature. The alphabetical order in which dictionaries are presented looks like a confession that the lexicon lacks internal organization.

This somewhat disparaging view overlooks the many possibilities for developing lexicography into *lexicology*. To write a dictionary is to explore the structure of the lexicon of a language (FRANÇOIS 2008), in connection with the study of social and cultural structures. Writing a dictionary requires delving into meaning, attempting to delineate connotations, polysemy, and relationships between words. Many dictionary entries could easily be expanded into essays. Thus, the vocabulary of kinship provides valuable insights about family structures and their history. (In the case of the Na language, the usefulness of this source of information has long been recognized (FÙ MÀOJÌ 1983), but it remains to be exploited systematically in light of social dynamics (MILAN 2021).) Beyond the semantic domain of kinship (a classic in the field of ethnolinguistic studies), various areas call for exploration, including emotions (TERSIS & BOYELDIEU 2017) and spirituality (FRANÇOIS 2013). In-depth

lexicographical descriptions can serve as a basis for various research approaches, which combine typology with a dynamic (diachronic) dimension.

One promising strand of research is the study of contact effects on the lexicon.

“The tendency for bilingual individuals to align the semantic structures of the languages they speak leads to the diffusion of certain lexical categorizations across vast linguistic and cultural areas: thus, specific semantic distinctions, specific patterns of polysemy, specific set phrases become telltale signs of a given area. It is sometimes possible to explain these areal phenomena in terms of links between language use and social practices in the region: certain modes of family organization, for example, may be correlated with specific lexical structures in the field of kinship, or in the vocabulary of marriage and interpersonal relationships.” (Alexandre François & Lameen Souag, argument of the seminar « *Structures du lexique : typologie et dynamiques* », LACITO, January 2018)

Specifically, comparative research into the lexicon of Na and Pumi (DAUDEY 2014) appears especially promising for an in-depth understanding of the languages and cultures of these two peoples which coexist in the Yongning Plain. This is one of many research issues which it is hoped that the present dictionary will help investigate. Thanks to the work of Gerong Pincuo 给汝品初, terms of comparison (comparanda) in the Pumi language are proposed for a number of words in the dictionary (around a hundred at the time of this version): Gerong Pincuo went through the entire word list (in its 2012 state) and provided the Pumi word where it seemed comparable. These may be words borrowed by Na and Pumi from a third language, such as Tibetan (particularly for religious vocabulary) or Chinese, or words borrowed from Na by Pumi (or vice versa), or inherited vocabulary.

As a conclusion, it must be emphasized that the dictionary contains many gaps, as well as approximations and, no doubt, errors. Criticisms and corrections from readers are most welcome.

Acknowledgments

First and foremost, special thanks to Latami Dashilamu 拉他咪打史拉姆, reference speaker and co-author of this work, for the motivation, perseverance and generosity with which she has been engaged in our collaboration since 2006. My warm thanks to her son Latami Dashi 拉他咪王勇 (拉他咪达石) for encouraging and supporting my work with his mother, and for giving the dictionary the benefit of his expert knowledge about Na society. My thanks to all family members for their patience and good humour over the years.

My special thanks go to Benjamin Galliot, who has been in charge of the Information Technology and typographic aspects since late 2016. The philosophy behind his work is that the software used should not put limitations on the development of the dictionary, but instead support and encourage it. His exceptional level of involvement allows each dictionary to be unique in its structure, development and layout, in order to best adapt to the specific features of the language described and the wishes of the lexicographers. It is his work that has given shape to the dictionary since version 1.2, from its general structure to the smallest typographical details. His commitment to beautiful typesetting has encouraged us to double our efforts to ensure that there is not too strong a contrast between the dictionary's beautiful form, on the one hand, and the shortcomings of the contents, on the other (inaccuracies, gaps and errors are to some extent inevitable when exploring a language with an oral tradition). The flexible and dynamic processing chain that Benjamin has put in place, which allows the XML and PDF files to be updated as the documentation work progresses, is also a strong incentive to forge ahead and achieve regular progress of the dictionary contents.

Many thanks also to Séverine Guillaume and Céline Buret for planning and implementing the formatting of the database and the production of the dictionary up until version 1.1. Many thanks to Laurent Romary and Mathieu Mangeot-Nagata for expert advice in digital lexicography, and to Guillaume Jacques for showing the way and for advice along the path.

Many thanks to connoisseurs of the Na culture and language for useful exchanges: Lamu Gatusa 拉木·嘎吐萨 (Chinese pen-name: Shi Gaofeng 石高峰), Liberty Lidz, and Christine Mathieu.

INTRODUCTION

Many thanks to Nathan Hill and Tsering Samdrup for identifying names of Tibetan origin, and to Gerong Pincuo 给汝品初 for pointing out Pumi comparanda. Many thanks to Yi Li 衣莉 for suggesting various corrections.

Special thanks to Roselle Dobbs for the flow of information, corrections and advice over the years. Many thanks to Latami Dashi 拉他咪王勇 (拉他咪达石) and A Hui 阿慧 for suggesting corrections. “Blessed are the true fault-finders, for they shall be called midwives of truth” (YLINEMI 2022, p. vi). Remaining errors and shortcomings are my own responsibility.

I am grateful to the Dongba Culture Research Institute 丽江市东巴文化研究院 in Lijiang for facilitating administrative and practical matters, and to Yunnan University for careful and sensitive management of fieldwork-related administrative matters.

So many people have supported this project that I must apologize for those names that should be here but were inadvertently left off the list.

This work was supported financially by the ANR project “Himalayan corpora” (HimalCo, ANR-12-CORP-0006) and by the LabEx “Empirical Foundations of Linguistics” project (EFL, ANR-10-LABX-0083). This work has also benefited from the results of the ANR projects “Phylogenetic assessment of Southern Qiangic” (PASQi, ANR-07-JCJC-0063), “Computational Language Documentation by 2025” (CLD2025, ANR-19-CE38-0015), “Probing neural representations for typological signal” (DeepTypo, ANR-23-CE38-0003) and “Glottalization in the light of Machine Learning” (Glot-TAL, ANR-24-CE38-3766).

VERB ☼ Tone: M_c ▶ To go. • 去 𑄂 (tonology) The M.L.L tone sequence that obtains for this verb in the frame **ACCOMP ~ PFV**, **le̯ṭ-bi̯l-ze̯]**, was noted as early as the first field trips (2007, 2008 and 2009). It was a puzzle, because this verb behaves like an L-tone verb in this frame, whereas it behaves like an M-tone verb in all the other frames used (to begin with: when preceded by the negation, **ṃʰṭ-**). This peculiarity, which distinguishes this verb (alongside ‘to go by, to elapse (time); to take place’, **gy̯ṭ]**, and the 3rd person past form of the verb ‘to go’, **hu̯ṭ]**) from the rest of M-tone verbs, leads to it being placed in a specific tonal subclass within M-tone verbs: the M_c class. 𑄂 **bi̯ṭ-th̄a̯!** • **ABILITIVE** • 可以去! 𑄂 **bi̯ṭ-th̄a̯ṭ-ze̯]**! • **ABILITIVE+PFV**: We can go now! • 可以去去了! 𑄂 **le̯ṭ-bi̯]** • to go back • 回去, 返回 𑄂 **ṇj̣ʰṭ|a̯|p̣h̄o̯|bi̯]** • I go out. • 我去外边。 𑄂 **ṇj̣ʰṭ|a̯|p̣h̄o̯|bi̯l-zo̯l-ho̯|ni̯]** • I’m going to have to go outside. • 我要去外边了。 𑄂 **ṭṣh̄u̯|a̯|p̣h̄o̯|bi̯l-zo̯l-ho̯|ni̯]** • (S)he is going to have to go outside. • 他要去外边了。 𑄂 **ṭṣh̄u̯|ə̯ṭṭse̯|ji̯|a̯|p̣h̄o̯|bi̯l-ho̯|ni̯]**? • Why will (s)he go outside? / Why would (s)he go outside? • 她出去干什么? 𑄂 See also: **hu̯ṭ]** c, **ḳh̄i̯]**, **h̄o̯]** a

NOUN ❸ Tone: M? H? ▶ Wheat (monosyllabic root inferred from disyllabic forms). • 小麦 (依据共时形态调系规则从双音节词推导的单音节词根)。◆ (tonology) According to the current synchronic rules, the disyllabic compounds **dzeŋ-t-ʃiŋ** (‘wheat straw’, literally ‘wheat bone’) and **dzeŋ-t-tɕʰiŋ** (‘wheat beard’, literally ‘wheat thorns’), with a #H tone, whose head (‘bone’, ‘thorn’) carries an H tone, must have a determiner that carries either an M tone or an H tone. We deduce that the monosyllabic root for ‘wheat’ carries either an M or an H tone. However, other diachronic scenarios are possible, such as the reduction to disyllabic forms **dzeŋ-t-ʃiŋ** ‘wheat straw’ and **dzeŋ-t-tɕʰiŋ** ‘wheat beard’ of earlier compounds that would have contained more than two syllables: for ex-

ample, if compounds formed on the basis of the disyllable **dzeŋ-t-ʃiŋ** ‘wheat’ had then been reduced to two syllables, by ellipsis of the syllable [ʃiŋ]. □ See also: **dzeŋ-t-tɕʰiŋ**, **dzeŋ-t-ʃiŋ**, **dzeŋ-t-ʃiŋ**

NOUN ❸ Tone: L# ▶ Zzijo, one of the seven Ddabe **daɿpɿɿ** classic epics. This is a classic that is recited for the healthy continuation of life. The main ceremony is held at the time of the coming of age ritual, at the age of 13. In Na (Mosuo) people's view, 13 years old means the renewal of life. The ages of 25, 37, 49 and 61 are likewise junctures of life, at which ceremonies must be held so the wheel of life rolls on smoothly. (Information supplied by Latami Wangyong.) • 《仔迥经》。拉他咪王勇解释: 这部经典是为了生命的延续、绵长而念诵的经典。主要仪式在年满 13 岁虚岁举行成年礼时举行。在摩梭人看来, 虚岁 13 岁意味着生命的重续。此外, 25 岁, 37 岁, 49 岁, 61 岁都是生命的关口, 也必须举行仪式来重续年轮, 使生命长寿。

ogy) According to consultant Ddeezhi, the most accurate Chinese translation of the expression would be 欺负人, ‘to humiliate someone’. This remark does not seem fully justified from a linguistic point of view, but the association of ideas underlines the proximity between one-off annoyance (literal meaning of the word: ‘to annoy’) and the perception that a person may have who feels resentment of a social status that places him or her in an unfavourable position in relations of authority and power. NOUN * Tone: -H# ▶ Year of the Rat. • 鼠年 ◊ (**tonology**) The tonal pattern of the phrase ‘Year of the Rat’ is different from that of other disyllabic expressions designating years in the duodenial cycle. We can conclude from this that the tone of the monosyllabic noun ‘rat’ (not preserved in the contemporary language, where it is replaced by a borrowing from Chinese) was neither #H (tone of ‘horse’, ‘ox’, ‘dog’), nor M (tone of ‘tiger’), nor LM (tone of ‘chicken’ and ‘pig’), nor LH (tone of ‘monkey’), nor L (tone of ‘sheep’). It was therefore probably an MH tone. This analysis is confirmed by the pronunciation of the monosyllable in the list of animals in the cycle. * Morphological makeup: hwɿ13, kʰy1

NOUN * Tone: LH ▶ Enamel: found in enamel plates, for instance. Literally ‘Westerners’ iron’. • 搪瓷 (汉语借词: ‘洋铁’) ◆ (tonology) The tonal behaviour of this loan is not fully consistent. For an LH tone, we

would expect an L.H.L tonal pattern for the phrase ‘enamelled saucepan’, as well as for the phrase ‘made of enamel’, /jɤ|tʰi|t|ɣɤ|/ but the observed pattern is L.M.M. Conversely, if the tone were LM, we would expect an L.M.M.M pattern for ‘enamelled plate’, which actually carries an L.H.L.L sequence: /jɤ|tʰi|kæ|bæ|/. The proposed interpretation is that the tone of borrowings still perceived as such is less stable than that of fully established vocabulary (perceived as belonging to the Na language). Concerning the second syllable, however, analysis as ‘rain’

does not go without saying, when looked at in dialectal

perspective. In the Alawua dialect, the second syllable is

not homophonous with ‘rain (its initial consonant is /ɕ/,

whereas that of ‘rain is /h/). The sequence /my|tɕi]/ has

The first syllable is always realized with a rising melody, whereas one would expect an M.H.L tonal pattern (/pæ˥˥ tʰa˥˥-kʰu˥˥/), with deployment of the MH contour over the first two syllables (M tone on the first syllable, and re-association of the H tone on the second syllable). This pronunciation, with a simple M tone on the first syllable, /pæ˥˥ tʰa˥˥-kʰu˥˥/, is understandable but not idiomatic. • 不要错过 (机会)! ❷ [le˥˥-pæ˥˥-ze˥˥]! • It's too late! / We have let the opportunity slip by! • 错过了!

NOUN 𠄎 Tone: #H ▶ Frog (monosyllabic root extracted from the disyllable). • 青蛙 (依据共时形态调系规则从双音节词推导的单音节词根)。 𠄎 (tonology) The root's tone is arrived at by making the assumption that the various disyllabic forms are the product of regular tone rules. The compound noun ‘frog meat’, /pɤ̌tɕě/ (with the head, /tɕě/, in the H tone), leads us to rule out the hypothesis of an LM, LH, L or MH tone. This leaves M and H. ‘Frog tail’ does not provide any clear evidence, as the tone of the monosyllable ‘tail’ has not yet been established. ‘Frog skin’ (M.M on the surface, analyzed as underlying //M// or //H//) is unexpected, as a compound with LH-tone head cannot have an M.M pattern (see Table 3.2a in the 2017 book). The disyllabic noun ‘frog’, /pɤ̌mǐ/, has the same tone (L) as /zɤ̌wæ̌mǐ/ ‘mare’, which is compatible with the hypothesis of an H-tone root (like ‘horse’). The provisional hypothesis is therefore that of an H tone. ǰ (proverb) nǎhǐ | pɤ̌tɕě-|dʒǔt; | pɤ̌tɕě-|yuǔ | tɕǎ-tǎ | my̌! | pɤ̌t-mæ̌t, | bæ̌tɕǒ | jǐ! • “The Naxi eat frog meat; they wear vests made of frog skin; and they make brooms with frog tails!” • 谚语: “纳西人吃青蛙, 披青蛙皮衣, 蛙尾巴当扫帚!” 𠄎 Synonym: pɤ̌mǐ

CLASSIFIER ㊦ Tone: L_b ▶ Classifier for packs (e.g. a pack of cigarettes). • 量词: 包 ◊ (phonology) Among classifiers belonging to the tone category L_b, some preferentially yield with a H# tone pattern when combined with a demonstrative, whereas others are preferentially realized with a MH# pattern. In the present state of the language, this appears to be a pattern of preference among variants. The pattern preferentially associated to this lexical item is H#. This word's status as a borrowing (perceived as such) may explain fluctuation: it is occasionally treated as belonging in the L_a category. ㊦ Etymology: (Chinese loanword) 包

NOUN ǰ Tone: LH ▶ Handle. • 把手 ǰ (**proverb**) **tso| -bi| -dzo|, | qy| -ɟ| | tsæ|! | hī| -bi| -dzo|, my| -ɟ| | tsæ|!** • “Objects are grabbed by their handles; people are grabbed by their names!” This proverbial expression highlights the role played by a person’s name when one wants to call them. For someone you don’t know, you’re reduced to interjections, which are much less focused and less effective. ◆ (**semantics**) This proverbial expression gets some of its flavour from a play on words: the verb ‘to seize’, **tsæ|**, is homophonous with the second syllable of the disyllabic word **my|tsæ|**, which means ‘name’ (synonymous with the monosyllable **my|** ‘name’ which appears in the proverb). • “物以把手抓，人以名字抓”、“东西，是用把手把的！人，是用名字把的！”这句谚语强调了，当你想打招呼给时，名字起多么重要的作用。对于不认识的人，就只能靠插话了（‘嗯，喂，你好……’），而这类插话的效果远不如人名。 ǰ Classifier: **k^hwɔ|_a**

The question arises: is it really a syllable /p^ha/, or would it be a syllable /p^hɤ/ coloured into [p^ha] by the vowel /a/ of the syllable that follows? (Likewise for the first syllable.) Answer (obtained in 2017): it is indeed /ts^ha|p^ha|la1/ and not /tts^hɤ|p^hɤ|la1/. If (as is likely) the presence of a vowel /a/ in the first two syllables is the result of regressive vowel harmony (from the third syllable backwards), this process is complete and lexicalized. ㊦ q^ha|dze1-ts^ha|p^ha|la1 • Husk of sweet corn (maize) cobs. • 苞谷叶 (玉米糠子的叶子)

NOUN * Tone: M | L ▶ Cozzi Ddimezzi, one of the seven Ddabe daʔpɤʔ classic epics, also known as Zzitu Cotu. This is the Na (Mosuo) people’s cosmogony, a narrative about the beginnings of the world and of human peoples. This classic has neither an oral recitation ceremony of its own nor a fixed time for recitation. The Ddabe ritual practitioners will select some passages to recite orally in each ceremony, using both chanting and recitation: chanting for some parts to be emphasized, and oral recitation as the backbone to the narrative. (Information supplied by Latami Wangyong.) • 拉他咪王勇解释: 达巴口诵经典《搓孜地玛孜经》, 也称《孜图搓图》或《搓德鲁若》。这是摩梭人的创世纪史诗, 反映了摩梭先民对蒙昧洪荒年代、人类形成之初的想象。这部

经典没有专门的口诵仪式和固定的念诵时间。但是，达巴在每个仪式中都要选部分章节来口诵。达巴可以采取演唱和念诵两种方式：演唱选取的是精妙的部分，口诵则是完整的叙述。☐ Synonym: dzu˥tʰɿ˥-tsʰo˥tʰɿ˥

tsʰo˥pjɿ˥ /tsʰo˥pjɿ˥/ *cobia* (Gi: same, Da: ∅, Jj: tsʰu˥pjɿ˥, La: tsʰo˥pi˥)

NOUN ❶ Tone: M ▶ Soap. Presumably borrowed from a language of Burma: compare Nung /tsʰa˥³¹ pi˥⁵⁵ io˥⁵⁵/ [Dai 1992], Luxi Achang and Lianghe Achang /tsʰaw˥⁵⁵ pjaw˥⁵⁵/ [Dai 1985], Longchuan Achang /tsʰaw˥³¹ piaw˥³¹/ [Dai 1992]. Culturally, it is not unlikely that soap was first introduced through contact/commerce with ethnic groups of Burma. The use of soap in Yongning quickly became widespread after contact with the soldiers of the People’s Liberation Army stationed in the

monastery, who used soap to wash their clothes by the stream. Previously, two types of plant were used, *laepaelaezee* [læ˥pʰæ˥-læ˥d̪zi] and *leeq* /lɿ˥/, which were crushed and boiled; the resulting liquid was used to wash clothes. • 肥皂。很可能借自缅甸的一种语言：如依语 tsʰa˥³¹ pi˥⁵⁵ io˥⁵⁵ [戴庆厦 1992]，潞西、梁河阿昌语 tsʰaw˥⁵⁵ pjaw˥⁵⁵ [戴庆厦 1985]，陇川阿昌族 tsʰaw˥³¹ piaw˥³¹ [戴庆厦 1992]。从文化上看，肥皂最初是通过与缅甸少数民族的接触/贸易传入的，这一点并非不可能。驻扎在扎美寺院里的人民解放军士兵用肥皂在溪边洗衣服，在与他们接触后，肥皂在永宁的使用迅速普及。以前，摩梭人使用两种植物：[læ˥pʰæ˥-læ˥d̪zi] 和 [lɿ˥]，将其捣碎并煮沸，所得液体用来洗衣服。☐ See also: [læ˥pʰæ˥-læ˥d̪zi], ɔ˥pʰɿ˥-kɔ˥d̪y˥]lɿ˥ ❷ Classifier: [u˥]

tʂʰæ˩2 /dɥu˩ˊ tʂʰæ˩1/ chae

CLASSIFIER 崇 Tone: MH ▶ Classifier for generations. • 量词: 代、世、辈、世代 ㄱㄱwɣ˩ˊ tʂʰæ˩ˊ • Five generations. This figure represents a symbolic threshold in the definition of the family. It is rare for five generations to be actually present under the same roof. Rather than five generations in the literal sense, the expression can be understood as referring to the five ages of life: children (under 13), teenagers / young adults (who do not yet have children), parents / middle-aged people, grandparents / elderly people, and finally very old people, who are old enough to be great-grandparents. But the expression can also refer to five generations (in the literal sense) who, although they do not live side by side under the same roof, are part of the same universe of reference, which the collective memory extends beyond the three (or four) living generations. The fourth and fifth generations, while no

longer physically present, are still very much present in the words of the elders who knew them. So there is no paradox, in terms of family oral tradition, in defining a household as comprising five generations. • 五代人。这个数字是一个象征性门槛。五代同堂的情况并不多见: 这一说法可以理解为指人生的五个年龄段, 即儿童 (13 岁以下)、少年 / 青年 (尚未生育)、母亲们与跟她们年龄相近的兄弟 (中年人)、母亲们的母亲们与其兄弟 (老年人), 最后是高龄老人。不过, 这个说法也可以指字面意义上的五代人: 虽然他们并不生活在同一屋檐下, 但却是同一参照系的一部分, 集体记忆超越了在世的三代人 (或四代人) 延长到第五代。第四代和第五代虽然已不在人世, 但在了解他们的长辈口中, 他们仍然是存在的。因此, 从家庭口述传统的角度来看, 将一个家庭定义为由五代人组成并不存在悖论。 ㄑ tʂʰe˩ˊɲi˩ˊ tʂʰæ˩ˊ • Twelve generations. This figure constitutes a second symbolic threshold in the definition of the family. The five-generation threshold corresponds to the span of oral family tradition: the people you know personally and those they knew personally. Between five and twelve generations lies the symbolic space of kinship relationships which, while distant, are still considered significant: a relative at the level of five to twelve generations is recognized as a family member of the second circle, as it were. The family feeling dies out after (at most) twelve generations. Knowing that you are theoretically related to someone at a distance of three centuries is not a strong enough basis for a feeling of closeness. • 十二代。这个数字构成了家族定义的第二个象征性门槛。五代的界限对应于口头家族传统的跨度: 亲自熟悉的人和他们在过去所熟悉过的人。五代到十二代之间这一象征性的空间, 虽然距离遥远, 但仍被视为有意义的亲属关系, 在这个空间里的人被视为远房表亲。十二代以上, 家庭的感觉就消失了, 知道人家在三个世纪前算是有血缘关系, 并不足以让人感觉彼此亲近。 ㊦ See also: te˩a, gɣ˩ˊtʂʰæ˩ˊ-hĩ˩ˊ 崇 Comparanda: (Pumi) tʂʰæ˩35

NOUN ㊦ Tone: L#- ▶ Merchant. • 商人 ㊦ (semantics) An etymology proposed (cautiously) by Liberty Lidz is ‘people who bang pots and pans’, because they would have signalled their presence in this way: “This may be in reference to the Chinese custom that in small business, the person conducting business will walk through town making a distinctive noise” (Lidz 2010:176n2). This hypothesis is not accepted by Mrs. Latami: in the past, pedlars signalled their presence by means of cymbals, not saucepans. A decisive argument here is that the word is cognate with Naxi **ɿu**-**la** | **be** |, whose first syllable is not the word ‘pot’ (Naxi: /bɿ/). wɣɿ~wɣɿ /wɣɿwɣɿ/ ua'ua (Gi, Jj: same, Dd: ɣwɿwɿ) (phonological elicitation)

VERB ❸ Tone: L ① ▶ To detour past, to bypass. • 绕过 ◆ (phonology) It has not been possible so far to elicit a simplex (non-reduplicated) form. ❸ ɟuɿ-wɣɿ~wɣɿ-ɿɿ • DELIMITATIVE ~ RED INCEPTIVE • 绕一绕 ❸ (phonological elicitation) wɣɿ~wɿ biɿ • ~ IMM_FUT • ~ 近将来 ❸ (phonological elicitation) wɣɿ~wɿ-zeɿ • PFV • 绕了 ❸ (phonological elicitation) leɿ-wɣɿ~wɿ | leɿ-seɿ • to bypass on foot; to walk past, bypassing (a certain place) • 走路绕过 ❸ leɿ-wɣɿ~wɿ | leɿ-tsʰuɿ-zeɿ. • We bypassed (the obstacle) and thus we were able to arrive. / We arrived after a detour. • 我们绕了 (障碍) 就到了。 ② ▶ To take a stroll, to go for a walk. The semantic extension from the original meaning, ‘to go around’, arguably has to do with the non-linear nature of the process: going around an obstacle means improvising according to the constraints of the terrain, and the route around it is neither linear nor fast. The process therefore has semes in common with ‘faire un tour, se balader’. The extension from the original meaning ‘to bypass’ can be seen as: to walk in a way that is not straight from one point to another, and hence, to wander around leisurely. • 散步 ❸ ɟuɿ-wɣɿ~wɿ | əɿ-suɿkɿ | ɟuɿ-seɿ-ɿɿ əɿ-biɿ? • Shall we go for a stroll? • 咱们去散散步, 好不好?

CLASSIFIER ❸ Tone: Lb ▶ Classifier for teams of oxen. In Yongning, the ard is drawn by two oxen, or two small water buffaloes, or one strong water buffalo. • 量词: 牛 (一架) ◆ (phonology) Among classifiers belonging to the tone category Lb, some preferentially yield with a H# tone pattern when combined with a demonstrative, whereas others are preferentially realized with a MH# pattern. In the present state of the language, this appears to be a pattern of preference among variants. The pattern preferentially associated to this lexical item is MH#. ❸ ɟziɿmiɿ | niɿ-pʰoɿ, | ɟuɿ-woɿ! • Two water buffaloes make up one team! •

It illustrates the fact that the tonal combination observed in the phrase 'to build a house' is also found in another phrase that has 'house' as its object. The phrase is admittedly unusual, but since it is synchronically acceptable, it counts as additional evidence in favour of the analysis of the lexical tone of the monosyllabic root as either LM or LH. • 拆房子 ㄟ tʂʰu1-zi1 • this family • 这家 ㄟ ɿzi1 hwæ1 • ‡to buy a house (example coined by the investigator, to investigate the monosyllable's potential to combine with other verbs, and its tone category; this example was refused by Mrs. Latami) • 买房 (这个例子是调查者构造的, 拉他咪女士确定是不可以说的。造这个例子的目的有两个: 看单音节词根“家”能不能跟其它动词结合, 也试着确定它的调类。) ㄟ la1-tʰɑ1-mi1-tɿ1, | ze1 zi1 ɲi1? • Where is the house of the Latami family? (Context: an outsider comes to the village of Alawua, looking for the house of Latami Dashi, whose songs he has heard; in the village, he asks where the family lives.) • 拉他咪家在哪里? When performing this ceremony, the Ddabe firstly recites down from the place where the ancestors lived, and progresses all the way to the village of the soul who has just left the human world. Then he recites the sequence of places the other way round: from the village where this soul lived to the ancestral land. There are five different routes for

sending souls back, depending on different ancestries. (Information supplied by Latami Wangyong.) • 达巴口诵经典《仁味经》。拉他味王勇解释：《仁味经》意思是《指路经》。当一个摩梭人离开人世后，达巴就要为其灵魂送行，指引他（她）回到祖先生活的地方。在举行这个仪式时，达巴首先从祖先居住地念下来，一直找到刚离开人世的这个灵魂的村庄，最后又从这个灵魂所居住的村长念诵到祖先地。由于流传地域不同，《仁味经》有五条不同的送魂线路。

POSTFACE

The Na-Chinese-French-English dictionary is the third dictionary in the Lexica collection. It is the last in the set of Lexica dictionaries whose earliest versions predate the current Lexika software suite and full-fledged Lexica collection (the version of the Na dictionary generated by the old PLexika software was numbered version 1.2).

The first distinctive feature of this dictionary is that it comes in three distinct versions, depending on the target language: Chinese, English and French. They are not symmetrical, the Chinese being the version that can be considered exhaustive (including all languages and notes), the English and French being mutually expunged of the other language. It was technically interesting to try and factorize to the greatest possible extent the code and templates specific to the three versions, in order to have a robust and flexible means of correcting and improving the three versions simultaneously, while retaining their specific features.

A second feature of this dictionary (or set of dictionaries) is a technical one: the use of metadata tags in the source LEX file. At first glance, this seems to make the structure more cumbersome, but it is in fact necessary due to the multiplication of diverse languages and of auxiliary metadata. It would obviously have been easy to convert these metadata into as many (sub)tags as necessary in order to keep a format that would resemble the original MDF format, but I felt that an intermediate structural level between the tag and the data properly speaking was fairly relevant. Accordingly, this feature was integrated into the main algorithm of the (J)Lexika engine. The ensuing downstream difficulties (notably matters of contradictory information from these metadata and from those inherent in the tag – or in the absence thereof) were worth overcoming.

Another special feature of the dictionary is an aesthetic one: the addition of letterheads in the page footer, to provide the reader with a clear overview of the various graphemes used in the language under study. This footer sets out the chosen lexicographical order. It also teases apart vowels and consonants. Boldface singles out the letterhead corresponding with the current page's location, and all other letterheads have links allowing smooth access to the relevant sections. This feature will certainly be added to the other dictionaries in the collection.

It is also worth noting that particular wishes with respect to the layout of the Chinese cover offered an opportunity for me to look into what L^AT_EX has to offer in this space. The results were highly satisfactory: aesthetic considerations did not conflict with programmatic flexibility. This paved the way. This led me to decide to pave the way for freer and less sober covers than initially envisaged for all dictionaries in the series. After all, as I write these lines, the first two dictionaries in the collection, which have been delayed for various reasons, still don't have a finished cover, so this rearrangement of the timetable will have been, against all expectations, beneficial for these two latecomers!

A final specificity of this dictionary project is the highly sustained interaction between the linguist, Alexis MICHAUD, and myself. A lot of thought and discussion has taken place through various channels, including face-to-face interaction, 'phone/video conversations, e-mail, Zulip, and the Github software forge, leading to numerous changes to the structure of the source data and improvements to the introduction, including some changes that I carried out directly myself. Many of these changes and discussions are saved in the forge tickets, which will serve as a valuable, open historical record.

The elaboration of the Chinese version was also an opportunity to discuss certain Chinese translations, in particular the name of the collection itself. More generally, this dictionary has also provided an opportunity to reflect on the notion of authorship in a thoughtful and conscientious way. The aim is to give due recognition to all those who have contributed, each in

their own way, to the lexicography project.

Finally, the hardest part for me is knowing that, despite all the care taken, there shall still be typos and imperfections in the released version, as is inevitable in any work of this type and size. Generally, I can live with this, as the Lexika processing chain is designed to generate a brand new dictionary very easily as soon as there is an update to the data or an improvement to the technical architecture (stylistic changes, new finishing touches, and such). But in this particular case, a print run is considered at the end, so it's not just a digital dictionary that could exist in a dozen versions! No: if you have a paper version in your hands, perhaps it will stay for decades (which is what we all hope!) and the errors shall be engraved in the fibres of the paper, year after year. As a perfectionist, it's very hard for me to accept that a document is printed when it could still be further polished and perfected. But we all know the adage about perfection (*La perfection n'est pas de ce monde*; an English saying even has it that "Perfect is the enemy of good"), so we have to accept it.

In conclusion, I hope that this book will benefit the Na people, and that it will contribute to the preservation and transmission of their rich cultural heritage.

Na (Mosuo) – English – Chinese dictionary

In southwestern China, straddling the border between Yunnan and Sichuan, there lives a famous ethnic group, the Na (a.k.a. Mosuo) people. While their customs have become renowned throughout the world, their language has not received comparable attention. This dictionary is designed not only as a tool for academic study but also as a gateway to explore Na culture and language on a solid linguistic basis. It is intended as a resource for the preservation and transmission of this endangered Tibeto-Burman language. The dictionary is suitable for linguists, ethnologists/anthropologists, and readers interested in Tibeto-Burman and minority languages of China. Drawing on years of field research, the authors aim to present the phonology and semantics of Na words, along with some cultural context, in as detailed and meticulous a manner as possible.

Three editions are available : the present one, tailored for English-speaking readers; another designed for Chinese-speaking readers; and a third one for French-speaking readers. The dictionary is part of a broader language documentation and description initiative that encompasses speech materials (including Na narratives, complete with audio recordings, transcriptions, and translations), all available online in open access.

Lexica collection

The guiding principles of the *Lexica* dictionary collection are rooted in the design of its underlying software, *Lexika*. The *Lexika* tool was developed with the core objective of embracing the full diversity of languages and linguists in shaping each dictionary's design. Customization is the cornerstone of both the collection and the software, allowing each dictionary to evolve with its own unique structure, design, and layout, fully adapted to the specific features of the language and the vision of its lexicographers.

With the goal of achieving the highest standards of technical quality, every effort is made to ensure a precisely crafted layout through a flexible, dynamic processing chain. Improvements made during work on each new language are integrated into the "Lexika" software, benefiting the entire "Lexica" collection. As the lexicographic databases grow, new versions of the dictionaries can be generated swiftly, enabling continuous content updates.

Particular attention is given to ensuring that each dictionary is a stand-alone, printable digital work, designed for easy consultation with minimal reliance on IT resources.

The "Lexica" collection thereby contributes to preserving and celebrating linguistic diversity and heritage, while advancing the field of electronic lexicography.
